Contents

Preface	xi
1 Introduction to cellular telecommunications	1
Beginnings	1
Overview of the systems	9
2 Radio waves and propagation	13
Electric fields	13
Magnetic fields	14
Radio waves	15
Frequency-to-wavelength conversion	17
Polarization	19
How radio signals travel	19
Refraction, reflection and diffraction	20
Coverage and network planning	25
3 Modulation	27
Radio carrier	27
Amplitude modulation	27
Modulation index	31
Frequency modulation	32
Modulation index and deviation ratio	33
Sidebands	34
Bandwidth	35
Improvement in signal-to-noise ratio	36
Frequency shift keying	37
Phase modulation	37
Phase shift keying	38
Minimum shift keying	40
Quadrature amplitude modulation	42
Spread spectrum techniques	43
Frequency hopping	43
Direct sequence spread spectrum	44
Orthogonal frequency division multiplex	47
Bandwidth and data capacity	49
Summary	50

4	Cellular basics	51
	Spectrum re-use	51
	Multiple access schemes	53
	Duplex operation	55
	Setting up calls	56
	Receiving and making a call	57
	Handover and handoff	58
	Channel usage	59
	Infrastructure	60
	Base transceiver station	61
	Mobile switching centre	62
	Mobile phone	62
	Voice coding	65
	Digital data structures	66
5	Analogue systems	67
	Today	68
	Basic system	68
	Base station	69
	Mobile switching centres	70
	Mobile equipment	71
	Voice messaging	71
	Signalling methods	72
	Control channels	74
	Forward control channel	74
	Reverse control channel	75
	Call initiation	75
	Paging and incoming call set-up	75
	Handoff	76
	Summary	77
6	GSM	79
	System architecture	80
	Equipment and subscriber identifiers	81
	Air interface	82
	Power levels	83
	Multiple access and channel structure	84
	Vocoders	88
	Operation	90
	General packet radio service	93
	GPRS network structure	94
	Layers	94

	GPRS mobiles	95
	GPRS coding	95
	GPRS physical channel	96
	Channel allocation	97
	GPRS operation	98
	EDGE	100
	Time slots	100
	Data coding and throughput	101
	Operation	102
7	North American TDMA	103
	System overview	104
	RF signal	104
	Channels	105
	Paging	109
	Handoff	109
	Authentication	110
	PDC	111
8	cdmaOne/IS-95	113
	Standards	113
	Spreading codes	114
	Radio signal construction	114
	Channels	115
	Forward link code channels	115
	Reverse channels	124
	Power control	128
	Handoff	130
	Discontinuous reception	130
	Call processing	131
	Vocoders	132
	Advantages of CDMA	133
9	CDMA2000	135
	1X and 3X	136
	Radio configurations	136
	CDMA2000 1X	137
	Power control	139
	Beam formatting	139
	Channels	139
	Packet data	142
	Handoff	142

CDMA2000 1xEV-DV	143
New features	143
Base station selection	146
Release D	146
Broadcast and multicast services	147
Fast call set-up	148
Mobile equipment identifier	148
CDMA2000 1xEV-DO	148
EV-DO air interface	149
Forward link	149
Reverse link	150
Mobile IP	151
10 UMTS	155
Capabilities	156
System architecture overview	156
User equipment	156
Radio network sub-system	158
Protocols	159
Air interface	159
Spreading	160
Synchronization	161
Power control	162
Frames, slots and channels	162
Logical channels	164
Transport channels	164
Physical channels	165
Packet data	167
Speech coding	168
Discontinuous reception	168
Access stratum protocol layers	168
Handover	169
Inter-system handover	170
The evolution of 3G networks	170
11 Position location	173
Cell ID	173
TDOA	174
A-GPS	174
GPS	174
Assistance from the base station	178
A-GPS	178

12	Conformance and interoperability testing	181
	Types of test	181
	Test cases	182
	CDMA system	184
	Summary	185
	Glossary	187
	Index	195
