Contents

Preface	xi
Acknowledgements	xiii
Part one: Multiple criteria in agricultural decisions	
1 Main features of the multiple criteria decision-making paradigm	3
Criticism of the traditional paradigm for decision-making	3
Economic versus technological decisions	4
Multiple objectives and goals in agricultural economics	7
Historical origins of the MCDM paradigm	8
Plan of the book	10
Suggestions for further reading	14
2 Some basic concepts	15
Attributes, objectives and goals	15
Distinction between goals and constraints	16
Pareto optimality	17
Trade-offs between decision-making criteria	18
A first approximation of the main MCDM approaches	19
Suggestions for further reading	20
Part two: Multiple criteria decision-making techniques	
3 Goal programming	23
Introductory example for handling multiple criteria in a farm planning model	23
The role of deviational variables in goal programming	26
Lexicographic goal programming	27
Sensitivity analysis in LGP	30
The graphical method for solving an LGP problem	31
The sequential linear method for LGP	33
A brief comment on other LGP algorithms	36
Weighted goal programming	37
A critical assessment of goal programming	38
Some extensions of goal programming	41
Suggestions for further reading	45

4 Multiobjective programming	47
An approximation of the multiobjective programming problem	47
The pay-off matrix in MOP	51
The constraint method	52
The weighting method	54
The noninferior set estimation method (NISE)	55
Multigoal programming	58
Some issues related to the use of MOP techniques	59
Suggestions for further reading	60
5 Compromise programming	63
An intuitive treatment of the concept of distance measures	63
A discrete approximation of the best-compromise solution	66
Compromise programming – a continuous setting	68
The method of the displaced ideal	71
Pros and cons of GP, MOP and CP	74
Relationships between different MCDM approaches	75
Suggestions for further reading	78
6 The interactive multiple criteria decision-making approach	79
Structure of an interactive MCDM process	80
The STEM method	81
The Zionts and Wallenius method	88
Interactive multiple goal programming	92
An assessment of interactive MCDM approaches	97
Suggestions for further reading	100
7 Risk and uncertainty and the multiple criteria decision-making techniques	103
Risk programming techniques in agricultural planning within an MCDM framework	103
Compromise-risk programming	108
Game theory models and the MCDM framework	110
Games with multiple goals and goal programming	113
Compromise games	116
Suggestions for further reading	118

Part three: Case studies

8 A compromise programming model for the agrarian reform programme in Andalusia, Spain	123
Background	124
Trade-off curves for seasonal labour, employment and gross margin	126
Compromise sets	129
An approximation of the efficient set in a three-dimensional objectives space	132
Concluding comments	133
9 Livestock ration formulation and multiple criteria decision-making techniques	135
A livestock ration formulation example	137
Ration formulation as a WGP problem	138
Ration formulation as an LGP problem	142
Ration formulation as an MOP problem	146
10 Livestock ration formulation via goal programming with penalty functions	149
Penalty functions in diet formulation	149
Diet formulation as a WGP model with penalty functions	152
Diet formulation as an LGP model with penalty functions	157
An assessment	160
11 Optimum fertiliser use via goal programming with penalty functions	163
References	169
Index	185
