About the Authors

Bryan Cunningham (JD, Certified in NSA IAM, Top Secret security clearance) has extensive experience in information security, intelligence, and homeland security matters, both in senior U.S. Government posts and the private sector. Cunningham, now a corporate information and homeland security consultant and Principal at the Denver law firm of Morgan & Cunningham LLC, most recently served as Deputy Legal Adviser to National Security Advisor Condoleezza Rice. At the White House, Cunningham drafted key portions of the Homeland Security Act, and was deeply involved in the formation of the National Strategy to Secure Cyberspace, as well as numerous Presidential Directives and regulations relating to cybersecurity. He is a former senior CIA Officer, federal prosecutor, and founding co-chair of the ABA CyberSecurity Privacy Task Force, and, in January 2005, was awarded the National Intelligence Medal of Achievement for his work on information issues. Cunningham has been named to the National Academy of Science Committee on Biodefense Analysis and Countermeasures, and is a Senior Counselor at APCO Worldwide Consulting, as well as a member of the Markle Foundation Task Force on National Security in the Information Age. Cunningham counsels corporations on information security programs and other homeland security-related issues and, working with information security consultants, guides and supervises information security assessments and evaluations.

Ted Dykstra (CISSP, CISA, CCNP, MCSE, IAM/IEM) is a Security Consultant for Security Horizon, Inc., a Colorado-based professional security services and training provider. Ted is a key contributor in the technical security efforts and service offerings for Security Horizon, and an instructor for the National Security Agency (NSA) Information Assurance Methodology (IAM). Ted's background is in both commercial and government support efforts, focusing on secure architecture development and deployment, INFOSEC assessments and audits, as well as attack and

penetration testing. His areas of specialty are Cisco networking products, Check Point and Symantec Enterprise Security Products, Sun Solaris, Microsoft, and Linux systems. Ted is a regular contributor to *The Security Journal*, as well as a member of the Information System Security Association (ISSA) and Information Systems Audit and Control Association (ISACA).

Ed Fuller (CISSP, GIAC GSEC) is the Chief Operating Officer and Principle Security Consultant with Security Horizon, Inc., a Coloradobased professional security services and training provider. He currently is the lead instructor for the NSA IAM and IEM courses and leads assessments and evaluations as well leading the IA-CMM appraisals. His specialties include implementation of the NSA IAM and IEM into commercial environments and the IA-CMM. Ed's background includes positions as a senior consultant for Titan Systems, and JAWZ, Inc, and Averstar, Inc.

Ed is a retired United States Navy Chief Petty Officer and later participated on the development of System Security Engineering Capability Maturity Model (SSE-CMM). Ed has also been involved in the development of the Information Assurance Capability Maturity Model (IA-CMM). Ed is a frequent contributor to *The Security Journal* and co-author of *Security Assessment: Case Studies for Implementing the NSA IAM*. Ed holds a Bachelor of Science in Information Management from the University of Maryland. He lives in Colorado with his family Patience and Leila.

Chris Gatford works for Pure Hacking Ltd. in Sydney, Australia as a Senior Security Consultant performing penetration tests for organizations all around the world. Chris has reviewed countless IT environments and has directed and been responsible for numerous security assessments for a variety of corporations and government departments.

Chris is an instructor for the Pure Hacking OPST course and in his previous role at Ernst & Young he was the lead instructor for eXtreme Hacking course. In both these roles Chris has taught the art of professional hacking to hundreds of students from global organizations.

Chris is a frequent speaker at many security related conferences (most recently presenting at AusCERT 2006). He is a member of several security professional organizations and is a Certified Information Systems

Security Professional. More details and contact information is available from his homepage, www.penetrationtester.com and his current employer http://www.purehacking.com.

André Gold is currently the Director of Information Security at Continental Airlines, one of the world's largest and most successful commercial and freight transportation providers. André was appointed to this position by the company's former CIO, making him the first person to hold this post in the company's 50-year history. As the Director of Information Security, André has established a risk-based information security program based in part on increasing the security IQ of over 42,000 employees and protecting the over \$2.5 billion continental.com property.

As an identified security practitioner, André has been featured in SC, Information Security, and CSO Magazine. André also presents at or participates in industry-related events. In 2006 André was named an Information Security 7 award winner in the retail sector, for his security contributions in the start-up and air transportation markets.

Before assuming his current role, André served as Technical Director of Internet and Network Services. In this role, he built and was responsible for Continental's infrastructure and continental.com property; a property which accounts for close to 25% of the company's revenue.

In his spare time, André is pursuing his MBA at Colorado State and has a BBA in Computer Information Systems from the University of Houston-Downtown. André was also a commissioned officer in the Army, receiving his commission from Wentworth Military Academy.

In addition to his position at Continental, André server on the Microsoft Chief Security Officer Council, the Skyteam Data Privacy and Security Subcommittee, Goldman Sachs' Security Council, as well as eEye Digital Security's and ConSentry Networks' Executive Advisory Councils.

Matthew Paul Hoagberg is an information technology and security professional with diverse experience in IT, personnel management, technology training, and business development support with Security Horizon, Inc., a Colorado-based professional security services and training provider. Matthew contributes to the security training, assessments, and evaluation that Security Horizon offers.

He currently serves as a Security Consultant, along with guidance from the Department of the Interior (DOI) and National Institute of Standards and Technology (NIST), to enhance the Bureau of Reclamation's (BOR) IT security management processes with a goal of improving the BOR's compliance with the Federal Information Security Management Act (FISMA) requirements. Review gap analysis performed by BOR identifying FISMA weaknesses. Work to establish a mechanism for identifying the minimum products necessary to ensure the target Departmental FISMA reporting grade.

Matthew holds a bachelor's degree from Northwester College and is a member of the Information Systems Security Association (ISSA), and co-author of *Security Assessment: Case Studies for Implementing the NSA IAM* (Syngress Publishing, ISBN 1-932266-96-8). Matthew currently resides in Monument, Colorado with his family.

Amanda Hubbard [JD] is a Trial Attorney assigned to the Computer Crime and Intellectual Property Section of the U.S. Department of Justice working on national security and computer intrusion issues. Prior to this assignment, Ms. Hubbard worked as an attorney for the Intelligence Community and the military on issues of computer forensics, electronic evidence, encryption, network security, vulnerability assessments, criminal law, and information sharing. She also serves as an Adjunct Professor for the Columbus School of Law at Catholic University where she co-teaches the seminar "National Security Law in Cyberspace," and a guest lecturer at: the Naval Postgraduate School Information Warfare Workshops; the Air Force Judge Advocate General School Information Warfare Course; the U.S. Secret Service; Federal Bureau of Investigation, and the United States Department of Justice National Advocacy Center. Ms. Hubbard regularly speaks to international audiences on cybersecurity and cybercrime. Prior works include portions of the 2002 ABA Committee on Cyberspace publication, "Patriot 'Games' No Longer: The Business Community's Role in Cybersecurity", and submissions to the International Telecommunications Union and the United Nations. She has been named as a 2005-06 Fulbright Scholar to the Norwegian Research Center for Computers and Law at the University of Oslo to research and write on transnational cybercrime issues. **Chuck Little** (CCSA, NSA IAM, NSA IEM) is a Senior Security Consultant for Security Horizon Inc. Security Horizon is a small veteran-owned business focused on INFOSEC, headquartered in Colorado Springs, Colorado. His specialties include Checkpoint FW-1, NetScreen Firewall/IDS/IPS, Perl coding, Linux, Solaris, Mac OS X, compliance auditing, network security architecture and design, and snowboarding.

Chuck is a veteran of the US Army, having spent over seven years on active duty. Chuck holds a bachelor's degree in Applied Computer Science from Illinois State University, with a minor in Philosophy. He is an occasional contributor to the MIND Project, a research venture into cognitive sciences, at Illinois State University. Chuck currently resides in Denver, Colorado; with winter weekends spent at Loveland Ski Area.

Steve Manzuik currently holds the position of Senior Manager, Security Research at Juniper Networks. He has more than 14 years of experience in the information technology and security industry, with a particular emphasis on operating systems and network devices. Prior to joining Juniper Networks, Steve was the Research Manager at eEye Digital Security and in 2001, he founded and was the technical lead for Entrench Technologies. Prior to Entrench, Steve was a manager in Ernst & Young's Security & Technology Solutions practice, where he was the solution line leader for the Canadian Penetration Testing Practice. Before joining Ernst & Young, he was a security analyst for a world wide group of white hat hackers and security researchers on BindView RAZOR Team.

Steve has co-authored *Hack Proofing Your Network, Second Edition*. In addition, he has spoken at Defcon, Black Hat, Pacsec, and CERT conferences around the world and has been quoted in industry publications including CNET, CNN, InfoSecurity Magazine, Linux Security Magazine, Windows IT Pro and Windows Magazine.

Greg Miles, (Ph.D., CISSP#24431, CISM#0300338, IAM, IEM) co-author of *Security Assessment: Case Studies for implementing the NSA IAM* (Syngress Publishing, ISBN 1-932266-96-8) is a Co-Founder, President, and Chief Financial Officer of Security Horizon, Inc. Security Horizon is a global veteran-owned small business headquartered in Colorado Springs, Colorado. Security Horizon provides global information security professional service,

training, and publishes *The Security Journal*. Greg is an U.S. Air Force Veteran and has been supporting the technology and security community for the last 18 years. Greg's background includes work with NSA, NASA, and DISA. Greg has supported efforts covering security assessments, evaluations, policy, penetration testing, incident response, and computer forensics.

Greg holds a Ph.D. in Engineering Management from Kennedy Western University, a master's degree in Management Administration from Central Michigan University, and a bachelor's degree in Electrical Engineering from the University of Cincinnati. Greg is a member of the Information System Security Association (ISSA) and the Information System Audit and Control Association (ISACA). He is also a co-founder of the Global Security Syndicate and teaches network security for the University of Advancing Technology.

C. Forrest Morgan (JD (1987), Trained in NSA IAM) has extensive experience in corporate practice and structure including contracting, corporate formation, and operations. Mr. Morgan advises information security consultants on drafting and negotiating contracts with their customers to best protect them against potential legal liability. Mr. Morgan's practice also has emphasized commercial contract drafting and reorganization, and corporate litigation, providing in-depth understanding of the business and legal environment. He has represented both national corporations and regional firms in state and federal courts and administrative agencies in matters of litigation, creditors' rights, bankruptcy, administrative law and employment issues. Mr. Morgan served as the Regional Editor of the Colorado Bankruptcy Court Reporter from 1989 to 1992, and he co-authored the Bankruptcy section of the Annual Survey of Colorado from 1991 to 1997. As a Principal of the Denver law firm of Morgan & Cunningham, LLC, Mr. Morgan's practice also includes corporate information and security consulting. He counsels corporations on information security programs, including development of corporate policies and procedures to minimize business risks and litigation exposure.

Ken Pfeil's IT and security experience spans over two decades with companies such as Microsoft, Dell, Avaya, Identix, BarnesandNoble.com, Merrill Lynch, Capital IQ, and Miradiant Global Network. While at Microsoft Ken coauthored Microsoft's "Best Practices for Enterprise Security"

white paper series. Ken has contributed to many books including *Hack Proofing Your Network, Second Edition* (Syngress, 1928994709) and *Stealing the Network: How to Own the Box* (Syngress, 1931836876).

Russ Rogers (CISSP, CISM, IAM, IEM, HonScD), author of the popular *Hacking a Terror Network* (Syngress Publishing, ISBN 1-928994-98-9), co-author on multiple other books including the best selling *Stealing the Network: How to Own a Continent* (Syngress Publishing, ISBN 1-931836-05-1), and Editor in Chief of *The Security Journal;* is Co-Founder, Chief Executive Officer, and Chief Technology Officer of Security Horizon; a veteran-owned small business based in Colorado Springs, Colorado. Russ has been involved in information technology since 1980 and has spent the last 15 years working professionally as both an IT and INFOSEC consultant. Russ has worked with the United States Air Force (USAF), National Security Agency (NSA), and the Defense Information Systems Agency (DISA). Mr. Rogers is a globally renowned security expert, speaker, and author who has presented at conferences around the world including Amsterdam, Tokyo, Singapore, Sao Paulo, and cities all around the United States.

Mr. Rogers has an Honorary Doctorate of Science in Information Technology from the University of Advancing Technology, a Masters Degree in Computer Systems Management from the University of Maryland, a Bachelor of Science in Computer Information Systems from the University of Maryland, and an Associate Degree in Applied Communications Technology from the Community College of the Air Force. He is a member of both ISSA and ISACA and Co-Founded the Global Security Syndicate (gssyndicate.org), the Security Tribe (securitytribe.com), and acts in the role of Professor of Network Security for the University of Advancing Technology (uat.edu).

Travis Schack (CISSP) is the founder and CEO of Vitalisec Inc., a Denverbased information security research and services company. Prior to founding Vitalisec, Travis worked in the network communications and financial industries, where he has performed numerous security application reviews as well as network attack and penetration tests against Unix, Linux, Windows, network, and communication systems. He has extensive knowledge in attack methodologies, intrusion detection, wireless networking, VoIP, security tools,

physical security, fraud detection and investigation, incident response, and computer security standards. He maintains his own test laboratory for researching the latest system vulnerabilities, attack methods/trends, and how to defend against them.

Travis has been published in multiple publications and has been a featured speaker at numerous security events around the world. He is an adjunct instructor for Denver University, teaching a technical hands-on Security Testing course for DU's Master program in Information Security. In his spare time, he organizes DC303, contributes to the Open Source Vulnerability Database (OSVDB) and Voice over IP Security Alliance (VOIPSA), and is a co-founder of the Global Security Syndicate (GSS).

Travis currently resides in Arvada, Colorado with his wife Kendra and 5 children, Kelsea, Austin, Gavin, Olivia, and Vivienne.

Susan Snedaker, Principal Consultant and founder of Virtual Team Consulting, LLC has over 20 years experience working in IT in both technical and executive positions including with Microsoft, Honeywell, and Logical Solutions. Her experience in executive roles at both Keane and Apta Software provided extensive strategic and operational experience in managing hardware, software and other IT projects involving both small and large teams. As a consultant, she and her team work with companies of all sizes to improve operations, which often entails auditing IT functions and building stronger project management skills, both in the IT department and company-wide. She has developed customized project management training for a number of clients and has taught project management in a variety of settings. Susan holds a Masters degree in Business Administration (MBA) and a Bachelors degree in Management. She is a Microsoft Certified Systems Engineer (MCSE), a Microsoft Certified Trainer (MCT), and has a certificate in Advanced Project Management from Stanford University. She recently completed an Executive program in International Management at Thunderbird University's Garvin School of International Management.

Part 1

From Vulnerability to Patch

Chapter 1

Windows of Vulnerability

Solutions in this chapter:

- What Are Vulnerabilities?
- Understanding the Risks Posed by Vulnerabilities

☑ Summary

4 Chapter 1 • Windows of Vulnerability

Introduction

This chapter will address vulnerabilities and why they are important. It also discusses a concept known as Windows of Vulnerability, and shows how to determine the risk a given vulnerability poses to your environment.

What Are Vulnerabilities?

So, what are vulnerabilities? In the past, many people considered a vulnerability to be a software or hardware bug that a malicious individual could exploit. Over the years, however, the definition of *vulnerability* has evolved into a software or hardware bug or *misconfiguration* that a malicious individual can exploit. Patch management, configuration management, and security management all evolved from single disciplines, often competing with each other, into one IT problem known today as vulnerability management.

NOTE

Throughout this book, we will reference vulnerabilities by their CVE numbers. CVE stands for Common Vulnerabilities and Exposures, and a list of CVE numbers was created several years ago to help standardize vulnerability naming. Before this list was compiled, vendors called vulnerabilities by whatever names they came up with, making vulnerability tracking difficult and confusing. The CVE created a list of all vulnerabilities and assigned each one a CVE ID in the format *CVE-year-number*. Vendors have been encouraged to use CVE numbers when referencing vulnerabilities, a practice which has removed most of the confusion. More information on CVE numbers is available at http://cve.mitre.org.

On the surface, vulnerability management appears to be a simple task. Unfortunately, in most corporate networks, vulnerability management is difficult and complicated. A typical organization has custom applications, mobile users, and critical servers, all of which have diverse needs that cannot be simply secured and forgotten. Software vendors are still releasing insecure code, hardware vendors do not build security into their products, and systems administrators are left to clean up the mess. Add to this compliance regulations that make executives nervous, and you have a high-stress situation which is conducive to costly mistakes.

The complications surrounding vulnerability management create what is known as a Window of Vulnerability. Although this may sound like a clever play on words to draw attention to the most commonly run operating system, it is actually used in reference to the length of time a system is vulnerable to a given security flaw, configuration issue, or some other factor that reduces its overall security. There are two types of Windows of Vulnerability:

- **Unknown Window of Vulnerability** The time from when a vulnerability is discovered to when the system is patched.
- **Known Window of Vulnerability** The time from when a vendor releases a patch to when the system is patched.
