Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

1. Sustainable waste management: valorization of waste for biohydrogen production	1
<i>Sheng Yang, Kebo Ma and Zhiqiang Liu</i>	
1.1 Introduction	1
1.2 Current status of waste	2
1.2.1 Introduction to waste	2
1.2.2 Harm of waste	2
1.3 Waste to energy technologies	4
1.3.1 Waste burning generating electricity technology	4
1.3.2 Marsh gas power generation	5
1.4 Biomass energy	6
1.4.1 Introduction to biomass energy	6
1.4.2 Application of biomass energy	7
1.5 Technologies for biohydrogen	8
1.5.1 Hydrogen production organisms	8
1.5.2 Process of organic anaerobic biodegradation	10
1.5.3 Reactors of hydrogen fermentation	12
1.5.4 Principle and classification of hydrogen fermentation	18
1.5.5 Research status of anaerobic fermentation biohydrogen	19
1.6 Environment and economy efficiency assessment for biohydrogen	24
1.6.1 Assessment of environmental efficiency	24
1.6.2 Assessment of economic efficiency	25
1.7 Conclusion	25
References	26
2. Waste to biohydrogen: potential and feasibility	33
<i>Youzhou Jiao</i>	
2.1 Introduction	33
2.2 Hydrogen production potential by agricultural and forestry waste	34

2.2.1	Straw biomass	35
2.2.2	Livestock and poultry dung	36
2.2.3	Forest deciduous biomass	37
2.3	Hydrogen production potential from industrial waste	38
2.3.1	Industrial waste	38
2.3.2	Paper sludge	41
2.4	Hydrogen production potential by domestic waste	43
2.4.1	Domestic sewage	43
2.4.2	Municipal organic solid waste	44
2.5	Feasibility of waste to biohydrogen	44
2.5.1	Feasibility of technology	44
2.5.2	Efficiency of hydrogen production	46
2.6	Concluding remarks and prospects	48
	References	50
3.	Waste to biohydrogen: progress, challenges, and prospects	55
	<i>Quanguo Zhang</i>	
3.1	Introduction	55
3.2	Progress of waste to biohydrogen	56
3.2.1	Development of waste pretreatment technology	56
3.2.2	Progress in hydrogen production technology	57
3.3	Challenges of waste to biohydrogen	62
3.3.1	Challenges of waste pretreatment technology	62
3.3.2	Challenges of biohydrogen production technology	63
3.4	Prospects of waste to biohydrogen	64
3.5	Perspective	66
	References	66
4.	Comparisons of biohydrogen production technologies and processes	71
	<i>Jianjun Hu</i>	
4.1	Introduction	71
4.2	Biological hydrogen production technology and process	75
4.2.1	Hydrogen production by photohydrolysis	75
4.2.2	Hydrogen production by dark fermentation	79
4.2.3	Hydrogen production by light fermentation	85
4.2.4	Coupling hydrogen production technology of fermentation bacteria by dark–light method	90
4.3	Comparison of biological hydrogen production process	96
4.3.1	Comparison of biological hydrogen production process	96
4.3.2	Limitations of biological hydrogen production	98
4.4	Conclusion	99
	References	100

5. Waste pretreatment technologies for hydrogen production	109
<i>Zhiping Zhang</i>	
5.1 Introduction	109
5.2 Physical pretreatment	110
5.2.1 Mechanical crushing	110
5.2.2 Radiation pretreatment	111
5.2.3 Superfine crushing	112
5.3 Chemical pretreatment	113
5.3.1 Dilute acid pretreatment	113
5.3.2 Alkali pretreatment	115
5.3.3 Oxidation pretreatment	116
5.4 Physicochemical pretreatment	116
5.4.1 High-temperature liquid water pretreatment	116
5.4.2 Steam explosion pretreatment	117
5.5 Biological pretreatment	118
5.6 Conclusions	119
References	119
6. Advances in dark fermentation hydrogen production technologies	123
<i>Danping Jiang and Shengnan Zhu</i>	
6.1 Introduction	123
6.2 The principle of dark fermentation	124
6.3 Critical parameters for dark fermentation biohydrogen production	125
6.3.1 Substrate	125
6.3.2 Inocula	127
6.3.3 Operation pH	128
6.3.4 Process temperature	129
6.4 Strategies to improve hydrogen yield	129
6.4.1 Pretreatment	130
6.4.2 Cofermentation	131
6.4.3 Additives	132
6.5 Use of dark fermentation tail liquid	133
6.6 Perspectives	134
References	134
7. Thermochemical processes for biohydrogen production	139
<i>Shuheng Zhao</i>	
7.1 Introduction	139
7.2 Hydrogen production technology	140

7.2.1	Hydrogen production technology from fossil energy	141
7.2.2	Hydrogen production technology by water electrolysis	142
7.2.3	Solar hydrogen production technology	143
7.2.4	Biomass hydrogen production technology	144
7.3	Thermochemical conversion hydrogen production technology	145
7.3.1	Pyrolysis	146
7.3.2	Gasification	151
7.3.3	Supercritical water gasification	153
7.4	Hydrogen production technology by thermochemical conversion of waste	154
7.4.1	Agricultural and forestry waste	155
7.4.2	Municipal solid waste	160
7.4.3	Industrial waste	161
7.4.4	Hydrogen production from other types of waste and multiple waste	165
7.5	Conclusion	170
	References	171
	Further reading	177
8.	Photosynthetic hydrogen production bacteria breeding technologies	179
	<i>Panpan Li</i>	
8.1	Introduction	179
8.1.1	Hydrogen production by photolysis of water	180
8.1.2	Hydrogen production by dark fermentation	180
8.1.3	Hydrogen production by photosynthetic fermentation	180
8.2	Photosynthetic hydrogen production bacteria	181
8.2.1	Pure cultured photosynthetic hydrogen production bacteria	182
8.2.2	Mixed culture photosynthetic hydrogen production bacteria	182
8.3	Growth characteristics of photosynthetic hydrogen production bacteria	184
8.3.1	Single-factor analysis of growth characteristics	184
8.3.2	Multifactor analysis of growth characteristics	188
8.4	Continuous culture system and device for photosynthetic hydrogen production bacteria	190
8.4.1	Continuous culture device of photosynthetic hydrogen production reactor	190
8.4.2	Anaerobic baffled reactor—type photosynthetic hydrogen production device	193

8.5	Hydrogen production of photosynthetic bacteria	194
8.5.1	Effect of culture conditions on hydrogen production	194
8.5.2	Effect of nutrients on hydrogen production	195
8.6	Conclusion	197
	References	198
9.	Photosynthetic biological hydrogen production reactors, systems, and process optimization	201
	<i>Chaoyang Lu</i>	
9.1	Introduction	201
9.2	Reactor type	202
9.2.1	Baffled reactor	202
9.2.2	Triangle flask	202
9.2.3	Tubular	203
9.2.4	Flat-type reactor	207
9.3	Systems and process optimization	208
9.3.1	Effect of hydraulic retention time on continuous hydrogen production	208
9.3.2	Effects of substrate concentration on continuous biohydrogen production	213
9.4	Conclusions and perspectives	221
	References	221
10.	Spectral coupling characteristics of photosynthetic biological hydrogen production system	225
	<i>Yanyan Jing</i>	
10.1	Introduction	225
10.2	Absorption spectrum of photosynthetic hydrogen-producing bacteria	227
10.2.1	Morphological characteristics of photosynthetic bacteria	227
10.2.2	Absorption spectrum of mixed photosynthetic bacteria	228
10.2.3	Absorption spectrum of single strain	228
10.3	Spectral coupling characteristics for growth and hydrogen production of photosynthetic bacteria	228
10.4	Comparison of hydrogen production capacity under optimal spectrum	230
10.5	Absorbance of mixed photosynthetic hydrogen production bacteria	231
10.5.1	Photometric effect on photosynthetic hydrogen production	231
10.5.2	Photometric effect on optical energy conversion rate	232
10.6	Conclusion	233
	References	233

11. Photosynthetic thermal effect of biological hydrogen production system	237
<i>Chao He</i>	
11.1 Introduction	237
11.2 Research on microbial thermodynamic model	238
11.2.1 Bacterial exponential growth kinetics	238
11.2.2 Logistic equation of bacterial growth	239
11.2.3 Bacterial linear growth kinetics model	240
11.2.4 Nonideal growth thermodynamic model	240
11.2.5 Metabolite inhibition model	241
11.3 Factors affecting photosynthetic heat effect of biological hydrogen production system	242
11.3.1 Initial temperature	242
11.3.2 Light intensity	242
11.3.3 Inoculation amount	242
11.3.4 Carbon source	242
11.3.5 Glucose concentration	243
11.3.6 Glucose access time	243
11.3.7 NH_4^+ concentration	243
11.4 Influence of thermal effect on hydrogen production	243
11.4.1 Influence on different initial temperatures on thermal effect hydrogen production	243
11.4.2 Effect of thermal effect on hydrogen production with different illuminations	246
11.4.3 Thermal effect on hydrogen production with different inoculations	248
11.4.4 Effect of on hydrogen production with different kinds of carbon	251
11.4.5 Thermal effect on hydrogen production with different concentrations of glucose	253
11.4.6 Thermal effect on hydrogen production with glucose in reactor at different times	255
11.4.7 Thermal effect on hydrogen production with different nitrogen concentrations	257
11.5 Conclusion	259
References	260
12. Scale-up and design of biohydrogen production reactor from laboratory scale to industrial scale	261
<i>Gang Li and Huan Zhang</i>	
12.1 Introduction	261
12.2 Circumfluent cylindrical reactor for hydrogen production by photosynthetic bacteria	262
12.2.1 Structure of circumfluent cylindrical reactor	262

12.2.2	Operation characteristics of circumfluence cylindrical reactor for hydrogen production by photosynthetic bacteria	263
12.3	Critical factor of photoreactor for hydrogen production	264
12.3.1	Anaerobic condition and illumination	264
12.3.2	Material of reactor and illumination	267
12.3.3	Photosynthetic pigment adsorption and light absorption	267
12.3.4	Insulation and illumination	267
12.3.5	Light source and temperature control	267
12.4	Design of large and medium-scale photoreactor	267
12.4.1	Interior light source	267
12.4.2	Multipoint light source distribution model	268
12.4.3	Enhance mixing and mass transfer by improving the reactor structure	268
12.4.4	Remove pigment from lighting surface	268
12.4.5	Provide light by sunlight and an artificial cold light source	268
12.5	Design of photoreactor with interior light source and multipoint light source distribution	269
12.5.1	Operation mode of photoreactor with interior light source and multipoint light source distribution	269
12.5.2	Design of sunlight collector and transmission unit	269
12.5.3	Measurement of optical path in solution of substrate for hydrogen production	270
12.5.4	Structure type of reactor	273
12.6	Conclusions	275
	References	276
