## Patterns of Information Management

By Mandy Chessell and Harald C. Smith

ISBN: 978-0-13-315550-1

Use Best Practice Patterns to Understand and Architect Manageable, Efficient Information Supply Chains That Help You Leverage All Your Data and Knowledge

Building on the analogy of a supply chain, Mandy Chessell and Harald Smith explain how information can be transformed, enriched, reconciled, redistributed, and utilized in even the most complex environments.

Through a realistic, end-to-end case study, they help you blend overlapping information management, SOA, and BPM technologies that are often viewed as competitive.

Using this book's patterns, you can integrate all levels of your architecture—from holistic, enterprise, system-level views down to low-level design elements. You can fully address key non-functional requirements such as the amount, quality, and pace of incoming data. Above all, you can create an IT landscape that is coherent, interconnected, efficient, effective, and manageable.

## The Business of IT How to Improve Service and Lower Costs

By Robert Ryan and Tim Raducha-Grace

ISBN: 978-0-13-700061-6

Drive More Business Value from IT...and Bridge the Gap Between IT and Business Leadership

IT organizations have achieved outstanding technological maturity, but many have been slower to adopt world-class business practices. This book provides IT and business executives with methods to achieve greater business discipline throughout IT, collaborate more effectively, sharpen focus on the customer, and drive greater value from IT investment. Drawing on their experience consulting with leading IT organizations, Robert Ryan and Tim Raducha-Grace help IT leaders make sense of alternative ways to improve IT service and lower cost, including ITIL, IT financial management, balanced scorecards, and business cases. You'll learn how to choose the best approaches to improve IT business practices for your environment and use these practices to improve service quality, reduce costs, and drive top-line revenue growth.

## **The Art of Enterprise Information Architecture** **A Systems-Based Approach for Unlocking Business Insight**

By Mario Godinez, Eberhard Hechler, Klaus Koenig, Steve Lockwood, Martin Oberhofer, and Michael Schroeck

ISBN: 978-0-13-703571-7

Architecture for the Intelligent Enterprise:  
Powerful New Ways to Maximize the  
Real-Time Value of Information

Tomorrow's winning "Intelligent Enterprises" will bring together far more diverse sources of data, analyze it in more powerful ways, and deliver immediate insight to decision-makers throughout the organization. Today, however, most companies fail to apply the information they already have, while struggling with the complexity and costs of their existing information environments.

In this book, a team of IBM's leading information management experts guide you on a journey that will take you from where you are today toward becoming an "Intelligent Enterprise."

## **The New Era of Enterprise Business Intelligence:** **Using Analytics to Achieve a Global Competitive Advantage**

By Mike Biere

ISBN: 978-0-13-707542-3

A Complete Blueprint for Maximizing the  
Value of Business Intelligence in the  
Enterprise

The typical enterprise recognizes the immense potential of business intelligence (BI) and its impact upon many facets within the organization—but it's not easy to transform BI's potential into real business value. Top BI expert Mike Biere presents a complete blueprint for creating winning BI strategies and infrastructure and systematically maximizing the value of information throughout the enterprise.

This product-independent guide brings together start-to-finish guidance and practical checklists for every senior IT executive, planner, strategist, implementer, and the actual business users themselves.

## Enterprise Master Data Management

### An SOA Approach to Managing Core Information

By Allen Dreibelbis, Eberhard Hechler, Ivan Milman, Martin Oberhofer, Paul Van Run, and Dan Wolfson  
ISBN: 978-0-13-236625-0

The Only Complete Technical Primer for MDM Planners, Architects, and Implementers

*Enterprise Master Data Management* provides an authoritative, vendor-independent MDM technical reference for practitioners: architects, technical analysts, consultants, solution designers, and senior IT decision makers. Written by the IBM® data management innovators who are pioneering MDM, this book systematically introduces MDM's key concepts and technical themes, explains its business case, and illuminates how it interrelates with and enables SOA.

Drawing on their experience with cutting-edge projects, the authors introduce MDM patterns, blueprints, solutions, and best practices published nowhere else—everything you need to establish a consistent, manageable set of master data, and use it for competitive advantage.

## Praise for *Analytics Across the Enterprise*

“Few major high-tech companies eat their own dog food. But give IBM credit: It practices what it preaches. This book provides an inside look at how IBM has applied analytics to nine business functions, the lessons it has learned, and the value it has derived. This book is valuable for anyone in a large company who wants to know how to apply analytics profitably.”

—**Wayne Eckerson**, Principal Consultant, Eckerson Group, and author, *Secrets of Analytical Leaders: Insights from Information Insiders*

“*Analytics Across the Enterprise* shows how even the most complex enterprise can transform itself with analytics. A powerful collection of real-world projects shows that using analytics to improve decisions, especially operational decisions, drives efficiency *and* innovation. The stories in this very readable book show the importance of actually taking action, not just developing insight; of caring about the end user context, not just the model; of gaining buy-in and managing organizational change; and much more. A great guide for anyone transforming their own organization with analytics.”

—**James Taylor**, author, *Decision Management Systems: A Practical Guide to Using Business Rules and Predictive Analytics* (IBM Press)

“*Analytics Across the Enterprise* is the only book on analytics written by three world-class experts ‘standing on the shoulders of a giant’ analytics powerhouse: an impressive first-hand account of nine breakthrough analytic journeys from 70 top executives and practitioners, the largest private math department in the world, and a leading consulting think tank. This is an unprecedented tour de force showing how a best-of-breed analytics company revolutionized its own business model.”

—**Gonçalo Pacheco de Almeida**, Associate Professor of Strategy, Head of the Business Analytics Initiative, and Academic Director of the MBA Strategy Specialization, HEC Paris Business School and the French National Scientific Research Center—HEC Lab

“A thoughtfully written collection of stories from within IBM, with proven techniques that are valuable for all current and future business leaders. IBM has been doing analytics since before it was ‘cool’ and, for the first time, shares an inside look at the very pragmatic, inspiring approach complete with lessons learned. *Analytics Across the Enterprise* not only changes the game, it explains how to win.”

—**Lawrence G. Singleton**, PhD, CPA, Dean, School of Management, Professor of Accounting and International Business, Marist College

“Organizations are awash in data. Many have transformed this data into information, yet few have identified patterns of insight from this information. A rare number of organizations can take the insight to action, but even fewer can create a pathway from data to decisions. In *Analytics Across the Enterprise*, Dietrich, Plachy, and Norton definitively chronicle what it takes to apply big data and analytics in the transformation of enterprises. The results: Successful leaders create competitive advantage in smarter workforces, optimized supply chains, and predictable sales performance. Organizations will learn how to move not only from gut-feel intuition but also to powerful fact-based decision making.”

—**R “Ray” Wang**, Principal Analyst and Founder, Constellation Research, Inc.

“The growing demand for analytics is a priority for business and IT to collaborate on the processes and technology required to gain the insights to guide organizations to be effective. This book helps organizations gain a perspective on what operating analytics across the enterprise is all about and most importantly why it is crucial across lines of business where the outcomes can be achieved from making continuous investments.”

—**Mark Smith**, CEO and Chief Research Officer, Ventana Research

“Glimpses of the IBM vision of the future for analytics have regularly appeared in the literature, and now for the first time we have a comprehensive inside account of how IBM uses advanced analytics to compete globally. Using examples from many functions (HR, marketing, finance, supply chain), this book provides a fascinating view of IBM as an intensively data-driven corporation. Senior executives familiar with analytics and data applications will find many ideas in this book on how they can harness analytics to improve their corporation’s performance. Executives less familiar with analytics may experience some ‘shock and awe’ in reading how far data- and analytics-driven corporations have progressed and what formidable competitors they have become.”

—**Peter C. Bell**, Professor, Management Science, Ivey Business School at Western University

“*Analytics Across the Enterprise* is a live chronicle of how the practice of analytics transcends the business functional boundaries and how it benefits all the business functions.”

—**Dr. Adam Fadlalla**, Associate Dean for Academic Affairs and Professor of Information Systems, College of Business and Economics, Qatar University

“The use of data and analytics to generate value is a journey for all organizations: a journey of technology, operational self-awareness, and culture. The joy and challenge of data and analytics is that it is difficult, and as such, it is a source of sustainable competitive value. This book tells the story of the journey of adoption of analytics for IBM and how we became a company driven by data and analytics. It explores the technical and mathematical complexities of the journey, the different business use cases, and the value it delivered to our clients, our employees, and our shareholders.”

—**Fred Balboni**, Global Managing Partner, Strategy and Analytics, Global Business Services, IBM Corporation

# Foreword

Like many of our clients, IBM® itself is focused on becoming a smarter enterprise. Connected people, integrated processes, and instrumented data: These form the foundation for “smarter.” A smarter enterprise makes decisions differently, creates value differently, and delivers value differently...and it all starts with the creative application of analytics.

In my conversations with clients about transformation, they often ask how IBM has approached analytics. Where should we get started? What are you doing inside IBM? What advice would you offer from your experience so far?

To help answer these questions for clients, our analytics practitioners inside IBM collaborated to develop this book. IBM has moved aggressively the past several years to build our analytics capabilities—through hiring talent, developing software, and acquiring firms with analytics tools that enhance our portfolio. IBM itself has been the alpha and beta for the deployment of these new technologies across our operations—from how we manage finance and marketing to how we optimize our supply chain and attract, retain, and develop talent. Indeed, we’ve found that in virtually every aspect of your organization, you can make smarter, more informed decisions by embedding analytics into how you do business.

I hope you will find our experience relevant and useful as you consider how to best seize on the power of big data, the world’s newest natural resource for competitive advantage. Progressive leaders are putting big data to work in fields ranging from finance to farming, from presidential politics to professional sports. It’s not just the data; it’s the insights gained from analyzing data that give organizations an edge over the competition.

As I tell clients, transformation is hard; it takes ongoing commitment and leadership from the top of the organization. But if there’s one truth I’ve learned about transformation over the years, it’s that you should always move

faster than you think you should. That's the only way to stay ahead of today's unrelenting pace of change.

This principle holds true for the adoption of analytics, the centerpiece of the next wave of our transformation. Don't wait for your data to be perfect. The time to start on this journey is now...and we hope our own experience at IBM will help you accelerate the benefits that accrue when you unlock the hidden value and power of your data.

—Linda Sanford

IBM Senior Vice President, Enterprise Transformation

# Preface

The genesis for this book came when Doug Dow, Vice President, Business Analytics Transformation, observed that a number of good analytics books were being published, written by experts in analytics, and that IBM had experts with significant experience solving business problems by applying analytics. Dow approached Brenda Dietrich, an IBM Fellow and an eminent operations research and analytics expert. Dietrich was receptive to the idea but was reluctant to sign up to write the book alone. Dow later approached two of his Business Analytics Transformation department members, Emily Plachy and Maureen Norton, who both jumped at the chance to tell IBM's story. Another motivation for the book is that Dow receives frequent requests from clients to learn how IBM is using analytics to elevate business results, so we know that IBM's story is of interest.

As we embarked on the journey to write this book about analytics, we were mindful of the rising tide of materials touting the value of analytics. So what would cause someone to cast his or her net and catch this one? Would a book about the challenges and triumphs, to continue the analogy, of one of the largest global ships on the sea have insights and lessons that others could benefit from, or at least find entertaining enough to read? We decided that this is a story that needed to be told. We decided that C-level executives in Fortune 500 companies, small business owners, and MBA students and faculty would see themselves and their challenges on these pages, and we needed to write this book. Introducing readers to a wide spectrum of ideas about how analytics is much more than a technology and instead is a smarter way of doing business would be reason enough to sail forward.

When we started planning for the book, we decided to organize it by business function. We identified analytics projects within a business function that were realizing value. Next, we interviewed the key members on the

projects. Then, one of the authors volunteered to be the lead writer for that chapter.

We authors made heavy use of IBM Connections, IBM's collaborative software, to interact as we wrote the book, creating a Connections Activity for the book, organized by chapters. During reviews, we added Connections Folders and Files, which helped us keep track of the many reviews and versions of each chapter. With three authors working in different locations, efficient collaboration was essential.

As the writing journey progressed, a common phrase kept coming into our conversations: "All roads lead to the book." The book became a seminal part of our work, feeding and enriching every aspect of our day jobs. We were able to leverage insights from the work to improve insights and results, effect connections between teams that were tackling similar problems, and help other transformation teams tell their stories.

Another very exciting aspect to this book is that we wanted it to be useful to the business leaders of today and tomorrow; reaching students and faculty is a high priority. During the development of the book, two of the authors, Maureen and Emily, developed and taught an innovative three-day pilot workshop at a premier MBA program in Europe, HEC University. Working with Dr. Hammou Messatfa, Technical Leader, European Government Industry, IBM Sales and Distribution, they held a very successful big data and analytics workshop, which led to additional analytic educational initiatives. Just as the book was in the final editing stages, Maureen had the opportunity to teach at a big data and analytics workshop for MBA students in the Middle East as well.
