Where people get food

Imagine you're sitting in a restaurant. The waiter brings your meal. You dig into a plate of steaming food. Yum! But have you ever wondered where that food came from? The rice might have come from Asia. It could have spent weeks on a boat to get to you. The lettuce might have been grown at the other end of the country. It could have spent a long time in a lorry to get to you. The cherry tomatoes might have been grown closer to home. They could have been picked today from the restaurant's windowsill garden. Food comes from farms and other sources all over the world.
