Mike Phillips
& Adam Linley**

MEET LEO

Meet Leo.

Brightest kid on the **block**.

Bright as in IQ off the scale, inventive as in Leonardo da Vinci inventive, and way, way ahead of his time ...

Block as in Stone Age block. Stone Age as in 30,000 years ago.

So that's Leo!

Then there's Pallas.
Leo's 'pet'.

Pallas's ancestors have been around for millions of years. You won't see many Pallas cats around today, unless you happen to be visiting the icy, cold wastes of Arctic Siberia (at the top of Russia).

As for this lot ...

Well, they go where Leo goes. Mostly!

LEO INVESTIGATES FUTURE COMMUNICATIONS

TABLETS AND TALKING

'I want everyone to concentrate,' says Leo.
'Things are about to change around here.'

Leo is always full of ideas, and he writes these out clearly on the slate for everyone to see. He explains everything very carefully, very slowly, because he's not sure just how much they understand.

But from now on, he tells them, things will be different. There will be no more slate. And there will be no more writing things down in books.

From now on, all the ideas will be downloaded onto the robot computer, Robo-wiz.

'We are in a computer age,' says Leo, 'an age of computer technology using tablets and touchpads and smartphones.'

Everyone listens carefully ... although they mostly don't know what Leo is talking about.
