Chapter 1	Intro	duction.		1
	1.1	Pream	ble	1
	1.2	A Few	Important Aspects of Structural Design	1
		1.2.1	Strength and Serviceability	2
		1.2.2	Ductility and Hysteresis	2
		1.2.3	Redundancy	4
	1.3	Archite	ectural Requirements	4
	1.4	Lateral	Load-Resisting System	9
		1.4.1	Subsystems and Components	9
		1.4.2	Moment-Resisting Frames, Braced Frames	
			and Shear Walls	
	1.5	Collap	se Pattern	
	1.6	Dvnan	nic Response Concept	
	1.7	Wind I	Load and Earthquake Load	
		1.7.1	Wind Load	
		1.7.2	Earthquake Load	17
Chapter 2	Winc	l Analys	is of Buildings	19
	2.1	Pream	ble	19
	2.2	Wind I	Load Provisions as per IS 875 (Part 3), 2015	21
		2.2.1	Different Approaches to Wind Analysis	22
			2.2.1.1 Pressure Coefficient Approach	23
			2.2.1.2 Drag Coefficient Approach	24
			2.2.1.3 Gust Factor Approach	
Chapter 3	Seisr	nic Anal	ysis of Buildings	29
	3.1	Pream	ble	
	3.2	Seismi	city	
	3.3	Genera	al Principles and Design Criteria	
	3.4	Respon	nse Spectrum of a Ground Motion	
		3.4.1	Acceleration Response Spectrum of a	
			Ground Motion	
		3.4.2	Liquefaction Potential	
			-	

	3.5	Estima	tion of Base Shear	49
		3.5.1	Various Aspects of Base Shear	49
		3.5.2	Estimation of Base Shear as per IS 1893	
			(Part 1), 2016	
			3.5.2.1 Equivalent Static Method	52
			3.5.2.2 Response Spectrum Method	54
	3.6	P-∆ An	alysis	55
	3.7	Ductili	ty Assessment	55
	3.8	Reinfo	rced Concrete Buildings with Unreinforced	
		Mason	ry Infill Walls	56
Chapter 4	Strue	ctural De	sign of Reinforced Concrete Buildings	57
	4.1	Preamb	ole	57
		4.1.1	Steps for Structural Design of Reinforced	
			Concrete Framed Buildings	
	4.2	List of	Relevant IS Codes	58
	4.3	Load C	Calculation	58
		4.3.1	Dead Load	58
	4.4	Design	Example of a Six-Storied Reinforced Concrete	
		Frameo	1 Residential Building	59
		4.4.1	Choice of Beam Depth	60
		4.4.2	Choice of Slab Thickness	61
		4.4.3	Calculation of Dead Load	62
		4.4.4	Live/Imposed Load	64
		4.4.5	Approximate Axial Load on a Particular	
			Column	64
		4.4.6	Design of Slab Panels	66
		4.4.7	Wind Load Analysis	71
			4.4.7.1 Basic Wind Pressure	71
			4.4.7.2 Wind Load as per "Drag Coefficient	
			Approach"	73
			4.4.7.3 Wind Load as per the "Pressure	
			Coefficient Approach"	78
		4.4.8	Seismic Load Analysis	81
		4.4.9	Substitute Frame Analysis under Dead and	
			Live Loads	89
		4.4.10	Frame Analysis under Wind and Seismic	
			Forces	116
		4.4.11	Summary on Maximum Bending Moment and	
			Shear due to Dead Load, Live Load,	
			Wind Load and Seismic Load	131
		4.4.12	Design of Frame Beams	146
		4.4.13	Design of Columns	151
		4.4.14	Design of Foundations	165
		4.4.15	Working Drawings of Slabs, Beams, Columns	
			and Foundations	168

	4.5	Desigr	n of a 15-S	toried Reinforced Concrete-Framed	
		Reside	ntial Build	ling on a Pile Foundation	175
		4.5.1	Dead Lo	and Live Loads	175
		4.5.2	Wind Ar	nalysis	177
			4.5.2.1	Basic Wind Pressure	177
			4.5.2.2	Wind Load as per "Drag Coefficient	
				Approach"	180
			4.5.2.3	Wind Load as per "Pressure	
				Coefficient Method"	181
			4.5.2.4	Wind Load as per "Gust Factor	
				Approach"	184
			4.5.2.5	Wind Load Analysis Using Software	195
		4.5.3	Seismic	Load Analysis Using Software	195
		4.5.4	Differen	t Checks	195
		4.5.5	Design of	of Beams, Columns and Pile Caps Using	
			Software	2	197
		4.5.6	Working	g Drawings of Slabs, Beams,	
			Column	s and Foundations	197

Preface

Reinforced concrete as a construction material provides enormous architectural freedom. The basic concepts for the design of Reinforced Concrete structural elements are, fundamentally, more or less the same, but students and practicing engineers have access to a number of computer software packages, hundreds of textbooks, articles and research papers and large amounts of online information. It is difficult to recommend the best and most appropriate design resources. The present engineering education system focuses more on computer-based mathematical models without understanding their shortcomings. However, such analyses would be more powerful and useful if they had been developed in the light of realistic engineering concepts. Intuitive skill and experience, along with computer-aided mathematical analysis, need to be given due attention. The design concept needs to be cost-effective and better than its alternative if it is to be accepted.

This book explains the wind and seismic design issues of Reinforced Concrete buildings in brief and provides design examples based on the recommendations of the latest Indian Standard (IS) codes, which are essential and mandatory documents for industrial design and in order to achieve an acceptable common platform of understanding. It also provides detailed working drawings; several such typical design examples of buildings are given. The book provides the basic insights necessary for the effective development of a design. The most intricate issues of Reinforced Concrete design are discussed, supplemented by a number of real-life examples for deeper understanding of the subject.

Guidelines are presented for evaluating the acceptability of wind-induced motions of tall buildings. A design methodology for members or the structure as a whole to deform well beyond their elastic limits, which is essential under seismic excitation, is discussed in depth. Detailed considerations for such nonelastic behavior, in order to formulate simple procedures to accommodate design objectives that receive due attention in the code provisions, are also critically discussed.

The target readers of this book are the practicing structural engineers and architects, students and teachers of Civil engineering and Architecture, striving to understand the design of wind- and earthquake-resistant Reinforced Concrete buildings. This book explains the concepts on behavior of Reinforced Concrete buildings against wind and earthquake forces. It is an attempt to respond to some of the frequently asked questions by architects and structural engineers regarding the design of reinforced concrete buildings against wind and earthquake forces. Detail design calculations and reinforcement detailing as per recommendation of different relevant codes of practices have been furnished. Reinforcement detailing in the form of working drawings are also included so as to reduce the gap of understanding between different groups of professionals in structural engineering. The book is intended to serve as a comprehensive reference for the wind and earthquake-resisting design calculations

and details of Reinforced Concrete buildings inline with the latest IS codes. It is a user-friendly complete package for all who deal with Reinforced Concrete design, explaining the wind and seismic design issues of Reinforced Concrete buildings and providing numerical design examples, along with working drawings based on the recommendations of the latest IS codes.

Professor (Dr.) Somnath Ghosh Dr. Arundeb Gupta

Acknowledgements

We would like to take this opportunity to remember the sacrifice made by and encouragement received from our wives, Shaswati and Manasi, as well as our children: Kushal, Madhurima and Swarnabha.

We are thankful to a number of persons who helped us in the preparation of the manuscript.

We are extremely thankful to Dr. Gagandeep Singh and Mr. Lakshay Gaba of CRC Press, Taylor & Francis, for their guidance and help in writing this book.

Professor (Dr.) Somnath Ghosh Dr. Arundeb Gupta

Authors

Somnath Ghosh is serving as Professor in the department of Civil Engineering Department at Jadavpur University in Kolkata, India. He was Dean of the Engineering Faculty and Head of the Civil Engineering Department at Jadavpur University, India. Dr. Ghosh obtained his B.E. in Civil Engineering from Jadavpur University and his M.Tech and Ph.D from the Indian Institute of Technology Kharagpur, India. He is a member and chartered engineer of the Institute of Structural Engineers in the United Kingdom. He has carried out research in the United States and Australia and delivered invited lectures in the United Kingdom, Australia, Singapore, Malaysia, Thailand and the United States. He has also delivered a huge number of lectures as a resource person in different Indian Institutes of Technology, National Institutes of Technology and universities. He has served as an expert member on several occasions for many institutes and universities. He has served as a member of several high-powered committees in the All India Council for Technical Education, the University Grants Commission, the Council of Scientific and Industrial Research, the Union Public Service Commission, etc. and at Jadavpur University level. He has contributed significantly in the areas of structural engineering and materials. He has also been a structural consultant to a number of key projects at the national level. Based on his research works, Dr. Ghosh has published a number of papers in peer-reviewed national and international journals and also published six monographs at international level. Apart from his research activities, Dr. Ghosh has demonstrated his technical skill by providing advice on industrial projects, and these have been implemented successfully. The repair and restoration techniques adopted for the earthquake-damaged structures of Kandla Special Economic Zone through his expertise deserve special mention. His other noteworthy contribution is the restoration of the earthquake-damaged assembly building in Sikkim. In addition, his skill in computer-aided structural analysis has been demonstrated through the design of a 52-meter tall Buddha statue at the top of a hill at Rabangla, Namchi, Sikkim, and a cricket stadium at Guwahati, Assam. His selection as country head for a division of a multinational company in Nigeria, speaks volumes about his administrative abilities as well as his academic skill and expertise;

Arundeb Gupta serves as Principal Structural Consultant for Skematic Consultants, in Kolkata, India. He obtained his B.E. and Ph.D in Civil engineering from Jadavpur University, India and has now built up around 30 years' industrial experience. He has designed several critical structures in highly seismic hilly terrain, as well as special structures, such as multipurpose cyclone shelters in coastal areas. Dr. Gupta has also carried out the restoration and designed the retrofitting of several earthquake-damaged structures. He has completed a large number of projects in health care, education, heavy industry, residential sectors, etc. at the national level. Dr. Gupta has published several papers in peer-reviewed national and international journals and he also serves as guest faculty in the Civil Engineering Department of Jadavpur University, India.
