

ROUTLEDGE RESEARCH IN HIGHER EDUCATION

Working with Underachieving Students in Higher Education

Fostering inclusion through narration and reflexivity

Edited by
Maria Francesca Freda,
José González-Monteagudo
and Giovanna Esposito

'This book is a "must read" for anyone interested in underachievement. The authors articulate underachievement with reflexivity difficulties and use narrative construction of meaning as a path to stimulate reflexivity and improve academic success. As a researcher on narrative and psychotherapy, I particularly appreciated the way narrative as a holistic concept fits this project: narratives are not just in the "heads" of people, but are also in their bodies and in the socio-symbolic constructions people share with each other. A very rich, creative and solid contribution!'

Miguel M. Gonçalves, Professor, University of Minho, Portugal

'Improving the life chances of non-traditional and underachieving students is one of the most important contributions that higher education can make to social mobility and social justice. This book focuses on the role of narrative approaches in fostering reflexivity, and thereby promoting learner agency. I've always sought to teach in ways that are challenging but inclusive, demanding but empowering, and this book comes as an important resource.'

John Field, Emeritus Professor, School of Education, Stirling University, UK

'This book is a major advancement in the application of narrative techniques in the context of students who are in trouble with themselves in the context of higher education. The focus on (under)achievement is translated here into reflexivity as observed in narrative practices. The development of new techniques is well described in the book, and should be of great interest to practitioners in counselling and higher education administrators.'

**Jaana Valsiner, Niels Bohr Professor of Cultural Psychology,
Aalborg University, Denmark**

'I consider this book a useful proposal for students, researchers and practitioners. The current situation is exacerbating the vulnerability and undermining solidarity, so attention to inclusion and to at-risk individuals is crucial. I emphasize the value of the topic, the focus on reflexivity and its analysis from different points of view, as well as the focus on strengthening the reflexivity in particular in at-risk individuals.'

Salvatore Soresi, Full Professor, University of Padua, Italy

'This is an important book from an interdisciplinary, multi-national team, wrestling with issues of under-achievement in higher education, and how this might be addressed in theory and practice. The study begins from the premise of the importance of social inclusion in Europe. The book pushes us towards new thinking, in the use of narrative and reflexivity, to enable unconfident learners to consider their academic and personal struggles in a developmental frame. This book is a real resource of hope in a hard-pressed university world.'

Linden West, Professor, Canterbury Christ Church University, UK

Working with Underachieving Students in Higher Education

Working with Underachieving Students in Higher Education: Fostering inclusion through narration and reflexivity presents an international and interdisciplinary approach to the study of the relationships between narrative devices and reflexivity in higher education. Stemming from a collaborative European research project called INSTALL (Innovative Solutions to Acquire Learning to Learn), it focuses on an innovative model aimed at promoting personal resources and reflective competencies in non-traditional, disadvantaged and underachieving students.

The book is divided into three sections, with the first providing an exploration of the key theoretical issues that formed the basis of the theoretical and methodological approaches in the INSTALL Project. The second section presents an innovative narrative methodology and discusses the most significant phases of the training process and of the main products. The third and last section provides a broad discussion of higher education policies and of the need to encourage innovation and reforms to improve the academic inclusion of underachieving students. Chapters in the collection examine interventions in Italy, Romania, Ireland and Spain, using a broad transnational, intercultural and comparative approach, to consider narrative tools using four channels: metaphoric, iconographic, writing and the body.

This book provides theoretical insights and practical methodologies which can be used to enhance quality teaching and innovation, as well as to help adapt to diversity in higher education. It will, therefore, be of key interest to academics, researchers and postgraduate students in the fields of higher education; sociology of education; education policy and politics; cultural and developmental psychology; and narrative research, as well as to those studying counselling, mentoring and coaching.

Maria Francesca Freda is Professor of Clinical Psychology in the Department of Humanities, University of Naples Federico II, Italy.

José González-Monteagudo is Professor of Educational Theory at the University of Seville, Spain.

Giovanna Esposito is Post Doc Researcher in the Centre for Active and Integrated Inclusion of Students (SInAPSi), University of Naples Federico II, Italy.

Contributors

Editors

Giovanna Esposito is a PhD and a Post Doc Researcher for the Center for Active and Integrated Inclusion of Students (SInAPSi) (University of Naples Federico II, Italy) within the research project Learning to Learn at the University. She has been a trainer for the European Project INSTALL and is a member of the Italian Health Psychology Association (SIPSA) and of the Italian Psychology Association (AIP). A common thread binds her research and experience, as proven by her numerous publications and participation in conferences: The interest in the promotion and evaluation of reflexive competences in training contexts with specific attention to the promotion and the evaluation of mentalization in an academic context. Her research has made use of both quantitative and qualitative analysis. Her recent publications in the field are 'Reflexivity: Applying a reflexive process to an educational context' (*Yearbook of Ideographic Science*) (2015) (Charlotte, NC: Information Age Publishing); 'Narrative learning for students in late: A model for intervention in higher education' (*Embodied Narratives. Connecting Stories, Bodies, Cultures, and Ecologies*) (2014) (University Press of Southern Denmark); 'Reflective and agentive functions of narrative writing: A qualitative study on the narratives of university students' (*Integrative Psychological and Behavioral Science*) (2016).

Maria Francesca Freda is a Professor of Clinical Psychology at the Department of Humanities at the University of Naples Federico II, Italy. She is a member of the directive team of the Center for Active and Integrated Inclusion of Students (SInAPSi) and of the Italian Psychological Association (AIP). She is also a member of the Italian Health Psychology Association (SIPSA).

Her scientific interests, shown in numerous studies, publications, and participation in conferences, have focused in the last years on (a) action-research methodology, oriented to clinical and psycho-social intervention models; (b) narratives as construction processes for experiences and as intervention devices; (c) the quali-quantitative text research and discourse

analysis methodologies. Her predominant application areas have been in psychological interventions in education and health organizations. She was the scientific coordinator for the ERASMUS Multilateral Project, INSTALL (Innovative Solution To Acquire Learning to Learn). Some of her publications are 'Understanding continuity to recognize discontinuity' (*Integrative Psychological and Behavioral Science*) (2011); 'Affect, unconscious, and sensemaking: A psychodynamic, semiotic, and dialogic model' (*New Ideas in Psychology*) (2011); *Narrazione e Intervento in Psicologia Clinica* [*Narration and Intervention in Clinical Psychology*] (2008) (Naples: Liguori).

José González-Monteagudo is a *Profesor Titular* in educational theories at the University of Seville, Spain. He has researched and written within the following areas: contemporary educational theories, qualitative research and ethnography, life history and narrative approaches related to research and education, special auto/biographical narratives, and non-traditional and international students. He is a visiting professor and visiting scholar at different universities. He speaks Spanish, English, French, and Italian in work and research contexts. He is an active member of the biographical networks ESREA and ASIHVIF (Francophone field). He has undertaken research stays, delivered research seminars and speeches, and presented papers in many countries in Europe as well as in the United States. His latest books are *Educational Journeys and Changing Lives. Adult Student Experiences* (co-edited with Barbara Merrill) (2010) (Seville: Digital@Tres); *Les Histoires de vie en Espagne. Entre formation, identité et mémoire*. (ed.) (2011) (Paris: L'Harmattan).

Authors

Anna Cannata is a Psychologist and Psychotherapist in the systemic approach. She is a member of the directive team of the research institution *Anima* (www.animaonline.org), based in Naples, Italy. She has worked as a Narrative Group Trainer for the INSTALL Project and as a psychotherapist and counsellor for web-based psychological interventions. She has written on and researched lifelong learning; life skills and key competences; life design, career counselling, and resilience; active participation and inclusion in the university context and contemporary educational theories/interventions; qualitative research and narrative approaches/methods; non-traditional/disadvantaged/underachieving students and narrative/reflexive methods; and online psychology.

She has published 'Group settings: Formation criteria, the size of training groups, and frequency of meetings' and 'Methodological principles of the Narrative Mediation Path' (*INSTALL – Innovative Solutions To Acquire Learning to Learn: Operational Manual and Guidelines for the Narrative Group Trainers*) (2014) (Rome: Aracne).

Raffaele De Luca Picione is a PhD and a scholarship holder for the SInAPSi Center, University of Naples Federico II, Italy. He graduated first in political science and then in clinical dynamic and community psychology. He works with meaning-making processes within healthcare relationships from a semiotic and dynamic psychological perspective. He is interested in the processes of subjective meaning-making in a cultural field, particularly in affective semiotic processes in reference to the relationship between thought, emotion, and language. In his written works, he has paid close attention to the issues of temporality and the dynamics of the processes related to the transformation of meaning. He is interested in semiotics, complexity paradigms, and the connections between cultural psychology and clinical psychology. He has written several international works on emotion/intersubjectivity/reflexivity. A recent publication is 'Reflexivity: Applying a reflexive process to an educational context' (*Yearbook of Ideographic Science*) (2015) (Charlotte, NC: Information Age Publishing).

Elena Mădălina Iorga is a PhD in communication sciences at the National University of Political Studies and Public Administration (SNSPA), Bucharest, Romania. Her research proposal addresses the role of the reflexive function in communicating emotions and developing efficient interpersonal relationships for graduate students from a multicultural perspective. As a member of the Social Cognition and Communication of Emotions Lab and the Center for Research in Communication, Mădălina conducted a series of studies focused on affective science (emotional labor, positive/negative affectivity, nonverbal sensitivity). Because of her academic foci, Mădălina is proficient in research design and methodology. In addition to the competences regarding quantitative data analysis (using sociological and psychological testing instruments), Mădălina has had prior experience using qualitative inquiry methods. Among her publications is 'Personality and academic dishonesty: Evidence from an exploratory pilot study' (*Romanian Journal of Communication and Public Relations*) (2013).

José Manuel Lavié-Martínez is a Lecturer in educational administration at the education faculty (University of Seville, Spain). His research interests are related to critical approaches to leadership and organization, educational innovation, and social justice. While preparing his doctoral thesis, he was a visiting researcher at the Ontario Institute for Studies in Education (Toronto, Canada) and at the Flinders Institute for the Study of Teaching (Adelaide, Australia). His research interests focus on educational leadership, critical theory and gender, and community. His award-winning doctoral dissertation has given rise to articles published in *Revista de Educación* and *Revista Española de Pedagogía*. He has also published articles in international peer-reviewed journals, such as 'Academic discourses on school-based teacher collaboration: Revisiting the arguments' (*Educational Administration Quarterly*) (2006) and 'Women in academic

administration at the university' (*Educational Management, Administration and Leadership*) (2010).

Stefano Manzo is a Clinical Psychologist and President of the research institution Anima (www.animaonline.org), based in Naples, Italy. He earned his PhD in clinical psychology with a dissertation on a review of the last ten years of empirical psychotherapy research studies. His research interests are data text analysis and the relationship between new technology and psychological processes. He is a visiting researcher at the Sigmund Freud University, the head of service quality at SInAPSi Center, and *ad hoc* reviewer for the peer-reviewed journals *Integrative Psychological and Behavioral Science* and *Research in Psychotherapy: Psychopathology Process and Outcome*. His principal publications are 'Looking at the psychotherapy process as an intersubjective dynamic of meaning-making: A case study with the discourse flow analysis' (*Journal of Constructivist Psychology*) (2010) and 'What kind of formation? What kind of psychologist?' (*Rivista di Psicologia Clinica*) (2009).

Maria Luisa Martino is a PhD, Post Doc Researcher for the Center for Active and Integrated Inclusion of Students (SInAPSi) (University of Naples Federico II, Italy). She has been a researcher for the European INSTALL Project (Innovative Solutions To Acquire Learning to Learn). Her research interests are psychological research interventions in public institutions, such as hospitals and universities, with particular regard to the use and evaluation of different and innovative narrative devices as tools to promote well-being. She has written international articles and actively participates in national and international conferences. During 2014, she co-authored the chapter 'Narrative learning for non-traditional students: A model for intervention in higher education' (*Embodied narratives: connecting stories, bodies, cultures and ecologies*) (2014) (University Press of Southern Denmark).

Teresa Padilla-Carmona is a Senior Lecturer at the Department of Research and Assessment Methods in Education (University of Seville, Spain). Her research interests are educational research, widening participation in higher education, gender and education, and career guidance and social inclusion. She has been a Visiting Scholar at the University of Sussex (UK) and the University of Nottingham (UK), where she has undertaken several international research projects. She is part of the expert panel for ANEP (Spanish Agency for Research Projects Evaluation). Her latest publications are 'Influences, values, and career aspirations of future professionals in education: A gender perspective' (*Educational Review*) (2013); 'Influence of gender, educational attainment and family environment on the educational aspirations of secondary school students' (*Educational Review*) (2011); 'Widening participation in Spanish higher education: Will the current reform promote the inclusion of non-traditional students?' (*Issues in*

Higher Education, Widening Participation: Casting the Net Wide?) (2012) (Hampshire: Palgrave MacMillan).

Nunzia Rainone is a PhD in health psychology and psycho-social risk prevention at the Department of Humanities, University of Naples Federico II, Italy. Her research is unified by an interest in the promotion of student inclusion to achieve educational and professional development.

Another of her fields of interest is the study of the resilience construct in different targets, such as university students, parents, and adolescents with disabilities. In her research, she uses both quantitative and qualitative methods and specializes in the use of the structural equation model as a quantitative analysis methodology, in narrative analysis and in the use of computerized procedures for textual analysis. Some of her publications are 'Aims of the INSTALL Project' and 'How to promote mentalization in training contexts: The Narrative Mediation Path' (*INSTALL - Innovative Solutions To Acquire Learning to Learn: Operational Manual and Guidelines for the Narrative Group Trainers*) (2014).

Dan Florin Stănescu is an Associate Professor and head of the Communications Department in the College of Communications and Public Relations (Bucharest, Romania) and coordinator of the Social Cognition and Communication of Emotions Lab, Center for Research in Communication at SNSPA. Holding a PhD in psychology from the University of Hamburg since 2006, Dan is currently teaching the following courses: Strategic HRM: Organizational Change, Organizational Health, and Organizational Counselling for the brand management and corporate communication master's degree programs Managerial Communication and Human Resources at SNSPA, and Training, Mentoring and Coaching on the Occupational Health and Organizational Performance master's degree program at the University of Bucharest, Faculty of Psychology and Educational Sciences. His research interests mainly revolve around human resource development, emotions, organizational psychology, lifelong learning, and clinical psychology. Some of his publications are 'Academic self-efficacy, emotional intelligence and the academic achievement of Romanian students: Results from an exploratory study' (*Journal of Educational Sciences & Psychology*) (2012) and 'The severity of academic dishonesty: A comparison of faculty perception and student self-reporting perspectives' (*Globalization and Changing Patterns in the Public Sphere*) (2010) (Bucharest: Editura Comunicarero).

Maura Striano is a Full Professor in education at the Department of Humanities, University of Naples Federico II. She is the responsible for the educational section at SInAPSi Center and is a PhD coordinator in psychological and pedagogical sciences and in mind, gender, and language. Her main research topic is educating for reflective thinking at different levels, and her most recent research studies were focused on adult learning, the

construction of supportive learning environments, the development of personal and professional identities, and the development of educational practices to support social inclusion.

Among her latest works are 'I servizi per l'inclusione degli studenti universitari presso l'Università degli Studi di Napoli Federico II' ['Services for college students' inclusion at University of Naples Federico II'], (*L'Integrazione scolastica e sociale*) (2014) and 'The theatre of the oppressed: An experiential practice to promote transformative learning?' (*Proceedings of the XI International Transformative Learning Conference* (2010) (New York: Teachers College Press).

Paolo Valerio is a Full Professor in clinical psychology at the University of Naples Federico II, Italy. He is a Delegate of the Rector for students with disabilities, Director of the Center for Active and Integrated Inclusion of Students (SInAPSi), past Head of the Service of Clinical Psychology of the University Hospital of Naples, and Director of postgraduate courses in clinical psychology at the University of Naples Federico II. He is also the coordinator for the university's student counselling services, President of the foundation Gender Identity Culture, and President of Osservatorio Nazionale sull'Identità di Genere (ONIG), the Italian equivalent of the World Professional Association for Transgender Health (WPATH). He has written and researched in the following areas: emotional disorders among late adolescents and young adults, psychodynamic counselling, emotion and learning, gender variance, sex development disorders (DSD), and homophobia and transphobia. His latest published books are *Gender-based Violence, Homophobia and Transphobia: Critical Approaches in Ireland, Italy and Spain* (ed.) (2014) (Milan: McGraw-Hill) and *Hermes: Linking Networks to Fight Sexual and Gender Stigma* (ed.) (2014) (Naples: Liguori).

Foreword

As a reader that has had the chance to read this volume before its publications, I have the privileged opportunity to draw attention to the many points of interest that make *Working with Underachieving Students in Higher Education* a remarkable piece of work, food for thought for a variety of audiences – researchers, professionals, policymakers.

This book, and the action-research that it documents, provides the field of higher education studies with an innovative conceptual framework – psychodynamic and semiotic cultural psychology. Cultural psychology has been developing for the last three decades, triggered by the recovery of Vygotsky's lesson (e.g. Bruner, 1990; Cole, 1996; Shweder, 2000). Within this stream of thought, a specific role has been played by the semiotic interpretation of the notion of culture (Valsiner, 2007, 2014; Valsiner and Rosa, 2012), in turn integrated with the psychodynamic recognition of the affective dimension of meaning (Salvatore and Freda, 2011; Salvatore and Zittoun, 2011). According to this semiotic and psychodynamic cultural psychology, human experience – and, more generally, the phenomena psychology deals with (micro- and macro-social processes) – consists of *dynamics of sensemaking*, namely ongoing intersubjective processes of (cognitive and affective) interpretation of the experience by means of infinite recursive transactions among signs.

If cultural theory offers a new look at psychological phenomena, the semiotic and psychodynamic interpretation of it represents an innovation within the innovation. Indeed, it provides a processual, dynamic reading of the category “culture”, which goes beyond a naïve, substantialist view of it (Salvatore and Venuleo, 2013; Valsiner, 2007). The naïve view sees culture as a self-contained entity affecting the functioning of whatever interacts with it (e.g. people's way of thinking, customs, norms etc.). According to such a standpoint, typical of cross-cultural studies – a social group *has/shares* a culture, and this culture determines some of its important qualities, for example behaviour X, common within the group, is due to the culture of the social group. Epistemological and theoretical arguments have been raised for criticizing such a substantialist view of culture (e.g. Valsiner, 2007; Salvatore, 2016a). However, the view of culture as a

dynamics of sensemaking, rather than a “thing”, makes it possible to adopt cultural psychology as the conceptual framework for local, field interventions in specific domains of human affairs, such as the higher education field. Indeed, interventions have to address people involved in practices mediated by, comprising and under the constraints of the institutional, pragmatic and social milieu; in sum, interventions are *movements dealing with movements*. Therefore, strategies and methodologies for promoting changes and empowerment need to be grounded on epistemological and theoretical frameworks that enable the “present moment” of the dynamics in action (Stern, 2004) to be grasped and enacted, along with their immanent, situated determinants and constraints. The shift from seeing culture as a reified entity acting externally to an ongoing process of sensemaking offers just such an enhancement – the chance of providing interventions with a clear, feasible identification of *for what, where, how and on what* to act.

In fact, in recent years semiotic and psychodynamic cultural psychology has been developing not only at the theoretical level but also as a *general theory of the method* – both research method (e.g. Valsiner *et al.*, 2009) and intervention method (Salvatore and Valsiner, 2014). A significant contribution to this development has been made by the tradition of clinical psychology developed by Carli and colleagues (Carli, 1987, 1996, 2007; Carli and Giovagnoli, 2011; Carli and Paniccia, 1999, 2003). Since the 1980s, Carli has developed a psychoanalytically oriented theory of the psychological intervention based on a view of the unconscious as a processual component of intersubjective and institutional processes. Thanks to this theory, clinical psychology is no longer confined within the limits of psychopathology or of the critical conditions that traditionally require the help of a psychologist (for a criticism of the concept of “help” in the psychological intervention, see Salvatore and Valsiner, 2006). Rather, it acquires the status of the *psychological theory of intervention*, enabling psychologists to address a vast plurality of issues of development and empowerment (e.g. institutional building, strategic marketing, territorial cohesion, customer satisfaction, school drop-out etc.).

The Neapolitan group leading the INSTALL Project is an active, representative expression of both such lines of work. As such it has made a fundamental contribution to their integration, in the perspective of a *culturally informed clinical psychology*. The Neapolitan team has been involved for the past two decades in various fields of intervention – health (e.g. Martino *et al.*, 2013; De Luca Picione *et al.*, 2015), school (e.g. Esposito *et al.*, 2013; Esposito and Freda, 2015), higher education (e.g. Esposito and Freda, 2016; Freda, Esposito and Quaranta, 2015) – at the same time offering an important contribution to the enhancement of the theory and methodology of cultural psychology (Salvatore and Freda, 2011; Freda, 2008, 2011; Freda, De Luca Picione and Martino, 2015). This book is therefore the point of arrival – at the moment – of an innovative, courageous and fruitful line

of work, which paves the way for further theoretical and methodological developments.

Several markers of such developments are already present in this volume.

First, the approach adopted by the project integrates the systemic and actor-focused levels of analysis and intervention. As is clearly discussed in the book (see Chapter 1, in particular), the basic idea is that academic performances and outcomes are a function of the resources the educational milieu makes available to actors (technologies, curricula, services supporting inclusion etc.), but this function is mediated by the actors' competence to recognize and use them. And this competence is not an invariant quality of the single individual but a function of the way the person interprets the institutional and intersubjective context of activity in which they are embedded. In sum, system and actor cannot be separated – academic performances and outcomes are a matter of their recursive linkage, which is sustained by ongoing, recursive acts of sensemaking.

This integrated view is not relevant for theoretical reasons alone – it has a strategic implication for the definition of the aims and domains of competence of the psychological intervention. Indeed, it leads us to go beyond the view of the psychological intervention as focused on individuals as such, regardless of the situated, contextual conditions of activity that motivate, mediate and define the purpose of the interventions (the latter are left to other disciplines and professional systems). INSTALL overcomes such a reified view of the individual – psychological processes do not work in a vacuum, as self-contained entities; they acquire their shape as the enactment of sensemaking that cannot but be *situated*, namely triggered, channelled, made up and mediated by the specific content of the system of activity in which they are embedded. Accordingly, the psychological intervention in the domain of higher education – as well as potentially in any domain of human affairs (Salvatore, 2016b) – is “psychological”, not because it addresses a psychological entity affecting such a domain from the outside, but because it is grounded on a psychological theoretical and methodological framework providing a specific way of viewing the higher education context and the way of acting on it in order to make it more inclusive.

Second, and strictly connected to the previous point, INSTALL is a seminal instance of the fact that cultural psychology's recognition of the situatedness and contingency of the psychological processes (Salvatore, 2014) is a premise for successful interventions. This is because it enables psychological processes to be understood and dealt with in terms of the idiosyncratic contextual forms they assume. As Freda and colleagues state in the first chapter: “Risk, protective factors and resources are, therefore, context specific and interdependent” (p. 14). On the other hand, this recognition does not prevent generalization but only prevents the traditional, nomothetic and inductive logic of generalization (Salvatore, 2014). Indeed, INSTALL is an example of a different approach to generalization, based on *abduction* – it provides an abstract theoretical framework enabling the
