Estimation of quantiles in a simulation model based on artificial neural networks

GRIN - Your knowledge has value

Since its foundation in 1998, GRIN has specialized in publishing academic texts by students, college teachers and other academics as e-book and printed book. The website www.grin.com is an ideal platform for presenting term papers, final papers, scientific essays, dissertations and specialist books.

Estimation of quantiles in a simulation model based on artificial neural networks

Master-Thesis von Sevda Alaca

Fachbereich Mathematik
Stochastik

Abstract

A function $m : \mathbb{R}^d \rightarrow \mathbb{R}$ is considered, which is costly to compute. X is an \mathbb{R}^d -valued random variable with known distribution. A nonparametric estimation of a quantile $q_{m(X),\alpha}$ is regarded, where $m(X)$ also is a random variable. An order statistic estimate and also a Monte Carlo estimate is considered, where m is replaced by an estimate m_n , which is constructed with the use of an artificial neural network. Then the quantile $q_{m(X),\alpha}$ is estimated by the Monte Carlo estimate of $q_{m_n(X),\alpha}$. Furthermore, a general error bound on the error of this quantile estimate is given. The two estimates are compared to each other by applying them on simulated data.

Acknowledgement

First of all I would like to thank Prof.Dr. Michael Kohler for his assistance throughout the process of working on the thesis. The provided help and advice made it much easier to get through difficulties.

I would also like to thank Benedikt Bauer, who was a big help in clarifying questions during the course of the thesis.

Furthermore, I would like to thank my fellow students for their support during the six months of writing this thesis and also throughout my studies. A special thanks to David Klein, who helped me whenever he could.

I also like to thank my colleagues at Subito AG, who were very supportive and patient during the period of completing my thesis. A special thanks goes to Helmut Wiland and Daniel Bräutigam.

A big thanks goes to everyone who did the proofreading.

And last but not least I would like to thank my family and friends who supported me in every way throughout my studies.
