Acknowledgements

Special thanks should be given to Robert Füss, whose expertise was invaluable in setting up the framework and methodology and for his ongoing professional guidance as well as to all of the staff at HSG for the useful and constructive support.

I would like to express my very great appreciation to Janine Lange, Araceli Fancher-Ferreira and Dietmar Horst for editing and their valuable insights.

CARE diagnostica deserves special thanks for financial support and providing insight into the financial world as well as to Mr. Masaki Nishinaga for his valuable recommendation.

I could not have completed this dissertation without the support of Emily Cirotzki.

Finally, Noah, Nils und Nelio Horeis provided stimulating discussions as well as happy distractions to rest my mind outside of my research.

MANAGEMENT SUMMARY

Purpose – The purpose of this work is to build a case for investing in international real estate focusing on single-family homes. In so doing, the comparative study takes into consideration transaction costs, taxation, as well as regulation and other institutional settings.

Design / methodology / approach – In this study average and total returns of a 20-year investment in four representative markets - Germany, Spain, San Diego, and Dallas – on two continents are compared against the general stock and bond markets. Volatility considerations are discussed, and their impact on return is shown. Risks are assessed as well as strategies for its reduction are provided. Finally, a concluding recommendation of where to invest is provided.

Empirical findings – At 4.63 % and 4.75 %, respectively, annual returns after inflation for San Diego and Dallas single family home investments are found in-line with world stock returns at 4.80 %. At 3.87 % the Spanish market follows closely behind eclipsing German real estate with 1.50 % and bonds at 1.48 %. Limited correla-

tion among the markets and amongst the asset classes allow for risk minimization by diversification.

Practical implications – The results suggest that real estate in particular in the San Diego area of California is a suitable target both in terms of return and safety, especially for long-term horizons. When focusing on Europe, the Spanish real estate market looks attractive for investors. The remaining capital should be allocated into international stocks via mutual funds linked to the MSCI world index.

Originality / value – The study adds additional insight on investments strategies into the mainly untouched area of single-family real estate returns on different continents and markets.

TABLE OF CONTENTS

<i>Management Summary</i>	<i>vi</i>
<i>Table of Contents</i>	<i>ix</i>
<i>Tables and Figures</i>	<i>xiii</i>
<i>List of Abbreviations</i>	<i>xv</i>
<i>I. Introduction</i>	<i>1</i>
I.1 Types of Investments	<i>3</i>
Excuse 1: REITs	<i>7</i>
I.2 Review of Relevant Literature.....	<i>10</i>
<i>II. Scope</i>	<i>19</i>
