Abstract

This paper addresses the legal issues that arise in the registration and use of advertising characters. The notion of “advertising characters” in this context is to be distinguished from the traditional “mascot”, as it includes human or anthropomorphic fictional characters that appear in advertising and marketing materials for a given product or service, or are being used for merchandising purposes. They are not limited to a mere graphical depiction, but moreover exhibit additional features such as character traits, voices and behaviour.

In recent years, the advertisement industry has been increasingly relying on the use of this type of characters for creating brand images. Reasons for this development are not only to be found in the availability of more sophisticated graphical representations following great advancements in the creation of CGI (and their popularity in the general audience), but also in the stronger incorporation of psychological theory in advertisement. In addition to that, they have come to generate considerable merchandising revenues.

While seldom operated independently of traditional trade marks, advertisement characters have become an important complement to them, adding substantial value to the overall brand image. Advertising characters have enormous recognition and identification value, and bear higher integrability in interactive marketing measures, and more importantly in modern social media, than conventional marks. Needless to say, their creation is connected with substantial investments.

This paper aspires to thoroughly analyse the eligibility for protection under traditional trade mark law, paying special attention to their intangible properties such as character traits, voices and behaviour. Furthermore, it will address the scope of their protection. Departing from trade mark law, this paper will also cover adjacent matters especially copyright law and unfair competition. While focussing on the legal situations in the U.S. and in Germany, it also mentions noteworthy European decisions and the Community Trade Mark regime.
