CONTENTS

Preface	xvii
----------------	-------------

Introduction	xxix
---------------------	-------------

PART I SOLVABLE SYSTEMS	1
--------------------------------	----------

1 Review of Solvable Systems	3
-------------------------------------	----------

1.1 Introduction and Rationale / 3	
------------------------------------	--

1.2 Worked Examples / 6	
-------------------------	--

1.2.1 Particle in One-Dimensional Potential / 6	
---	--

1.2.2 Particle in Space / 12	
------------------------------	--

1.2.3 Weakly Coupled Oscillators / 12	
---------------------------------------	--

1.2.4 Conservation of Momentum and Energy / 24	
--	--

1.2.5 Effective Potential / 25	
--------------------------------	--

1.2.6 Multiparticle Systems / 28	
----------------------------------	--

1.2.7 Dimensional/Scaling Considerations / 31	
---	--

Bibliography / 31	
-------------------	--

PART II THE GEOMETRY OF MECHANICS	33
--	-----------

2 Geometry of Mechanics I: Linear	35
--	-----------

2.1 Introduction / 35	
-----------------------	--

2.2 Pairs of Planes as Covariant Vectors / 37	
---	--

2.3	Differential Forms / 42
2.3.1	Geometric Interpretation / 42
2.3.2	Examples Illustrating the Calculus of Differential Forms / 46
2.3.3	Connections between Differential Forms and Vector Calculus / 50
2.4	Algebraic Tensors / 54
2.4.1	Vectors and Their Duals / 54
2.4.2	Transformation of Coordinates / 56
2.4.3	Transformation of Distributions / 60
2.4.4	Multi-Index Tensors and Their Contraction / 61
2.4.5	Overlap of Tensor Algebra and Tensor Calculus / 64
2.5	(Possibly Complex) Cartesian Vectors in Metric Geometry / 66
2.5.1	Euclidean Vectors / 66
2.5.2	Skew Coordinate Frames / 68
2.5.3	Reduction of a Quadratic Form to a Sum or Difference of Squares / 68
2.5.4	Introduction of Covariant Components / 70
2.5.5	The Reciprocal Basis / 71
2.5.6	Wavefronts, Lattice Planes, and Bragg Reflection / 74
2.6	Unitary Geometry / 80
2.6.1	Solution of Singular Sets of Linear Equations / 84
	Bibliography / 88

3 Geometry of Mechanics II: Curvilinear

89

3.1	(Real) Curvilinear Coordinates in N-Dimensions / 89
3.1.1	Introduction / 89
3.1.2	The Metric Tensor / 90
3.1.3	Relating Coordinate Systems at Different Points in Space / 92
3.1.4	The Covariant (or Absolute) Differential / 97
3.1.5	Derivation of the Lagrange Equations of Mechanics from the Absolute Differential / 101
3.1.6	Practical Evaluation of the Christoffel Symbols / 106
3.1.7	Evaluation of the Christoffel Symbols Using Maple / 107
3.2	Absolute Derivatives and the Bilinear Covariant / 109
3.3	Lie Derivative—Coordinate Approach / 111
3.3.1	Lie-Dragged Coordinate Systems / 111

3.3.2	Lie Derivatives of Scalars and Vectors /	115
3.4	Lie Derivative—Lie Algebraic Approach /	120
3.4.1	Exponential Representation of Parameterized Curves /	120
3.4.2	Identification of Vector Fields with Differential Operators /	121
3.4.3	Loop Defect /	122
3.4.4	Coordinate Congruences /	123
3.4.5	Commutators of Quasi-Basis-Vectors /	125
3.4.6	Lie-Dragged Congruences and the Lie Derivative /	126
	Bibliography /	130

4 Geometry of Mechanics III: Multilinear **132**

4.1	Generalized Euclidean Rotations and Reflections /	132
4.1.1	Introduction /	132
4.1.2	Reflections /	133
4.1.3	Expressing a Rotation as a Product of Reflections /	134
4.1.4	The Lie Group of Rotations /	136
4.2	Multivectors /	137
4.2.1	“Volume” Determined by Three and by n Vectors /	137
4.2.2	Bivectors /	139
4.2.3	Multivectors and Generalization to Higher Dimensionality /	140
4.2.4	“Supplementary” Multivectors /	142
4.2.5	Sums of p -Vectors /	143
4.2.6	Bivectors and Infinitesimal Rotations /	143
4.3	Curvilinear Coordinates (Continued) /	146
4.3.1	Local Radius of Curvature of a Particle Orbit /	146
4.3.2	Generalized Divergence and Gauss’s Theorem /	147
4.4	Integration and Exterior Differentiation of Forms /	150
4.4.1	One-Dimensional Integrals /	150
4.4.2	Two-Dimensional Integrals /	151
4.4.3	Metric-Free Definition of the “Divergence” of a Vector /	153
4.5	Spinors in Three-Dimensional Space /	155
4.5.1	Definition of Spinors /	155
4.5.2	Demonstration That a Spinor Is a Euclidean Tensor /	156

- 4.5.3 Associating a 2×2 Reflection (Rotation) Matrix with a Vector (Bivector) / 156
- 4.5.4 Associating a Matrix with a Trivector (Triple Product) / 157
- 4.5.5 Representations of Reflections / 158
- 4.5.6 Representations of Rotations / 158
- 4.5.7 Operations on Spinors / 159
- 4.5.8 Real Euclidean Space / 160
- 4.5.9 Real Pseudo-Euclidean Space / 161

Bibliography / 161

PART III LAGRANGIAN MECHANICS 163

5 Lagrange–Poincaré Description of Mechanics 165

- 5.1 Review of the Lagrange Equations / 165
- 5.2 The Poincaré Equation / 166
 - 5.2.1 Some Features of the Poincaré Equations / 175
 - 5.2.2 Invariance of the Poincaré Equation / 176
 - 5.2.3 Translation into the Language of Forms and Vector Fields / 177
 - 5.2.4 Example: Free Motion of a Rigid Body with One Point Fixed / 178
- 5.3 Vector Field Derivation of the Poincaré Equation / 181
 - 5.3.1 The Basic Problem of the Calculus of Variations / 181
 - 5.3.2 The Euler–Lagrange Equations / 182
 - 5.3.3 Calculus of Variations Using the Algebra of Vector Fields / 183

Bibliography / 187

6 Simplifying the Poincaré Equation With Group Theory 188

- 6.1 Continuous Transformation Groups / 188
- 6.2 Use of Infinitesimal Group Parameters as Quasi-coordinates / 191
- 6.3 Infinitesimal Group Operators / 193
- 6.4 Commutation Relations and Structure Constants of the Group / 200
- 6.5 Qualitative Aspects of Infinitesimal Generators / 202

6.6	The Poincaré Equation in Terms of Group Generators /	205
6.7	The Rigid Body Subject to Force and Torque /	207
6.7.1	Group Parameters as Quasi-Coordinates /	207
6.7.2	Description Using Body Axes /	209
6.8	Example: Rolling Sphere /	212
6.8.1	Commutation Relations Appropriate for Rigid Body Motion /	212
6.8.2	Bowling Ball Rolling without Slipping /	214
	Bibliography /	220
7	Conservation Laws and Symmetry	221
7.1	Multiparticle Conservation laws /	221
7.1.1	Conservation of Linear Momentum /	221
7.1.2	Rate of Change of Angular Momentum: Poincaré Approach /	223
7.1.3	Conservation of Angular Momentum: Lagrangian Approach /	224
7.1.4	Conservation of Energy /	225
7.2	Cyclic Coordinates and Routhian Reduction /	226
7.2.1	Integrability; Generalization of Cyclic Variables /	229
7.3	Noether's Theorem /	230
	Bibliography /	233
PART IV	NEWTONIAN MECHANICS	235
8	Gauge-Invariant Mechanics	237
8.1	Vector Mechanics /	237
8.1.1	Vector Description in Curvilinear Coordinates /	237
8.1.2	The Frenet–Serret Formulas /	240
8.1.3	Vector Description in an Accelerating Coordinate Frame /	244
8.1.4	Exploiting the Fictitious Force Description /	249
8.2	Single-Particle Equations in Gauge-Invariant Form /	255
8.2.1	Newton's Force Equation in Gauge-Invariant Form /	256
8.2.2	Active and Passive Interpretations of Time Evolution /	259

8.2.3	Continued Discussion of the Cartan Matrix / 261	
8.2.4	Reconciling Fictitious Force and Gauge-Invariant Descriptions / 262	
8.2.5	Newton's Torque Equation / 265	
8.2.6	The Plumb Bob / 266	
8.3	Lie Algebraic Description of Rigid Body Motion / 271	
8.3.1	Space and Body Frames of Reference / 272	
8.3.2	Review of the "Association" of 2×2 Matrices to Vectors / 274	
8.3.3	"Association" of 3×3 Matrices to Vectors / 276	
8.3.4	Some Interpretive Comments Concerning Similarity Transformations / 277	
8.3.5	Rigid Body Equations in Rotating Frame / 279	
8.3.6	The Euler Equations for a Rigid Body / 281	
	Bibliography / 282	
9	Geometric Phases	284
9.1	The Foucault Pendulum / 284	
9.1.1	Fictitious Force Solution / 286	
9.1.2	Gauge-Invariant Solution / 287	
9.2	"Parallel" Displacement of Coordinate Axes / 290	
9.3	Tumblers, Divers, Falling Cats, etc. / 295	
9.3.1	Miscellaneous Issues / 301	
	Bibliography / 304	
PART V	HAMILTONIAN MECHANICS	305
10	Hamiltonian Treatment of Geometric Optics	307
10.1	Motivation / 307	
10.1.1	The Scalar Wave Equation / 309	
10.1.2	The Eikonal Equation / 310	
10.1.3	Determination of Rays from Wavefronts / 311	
10.1.4	The Ray Equation in Geometric Optics / 312	
10.1.5	Variation of Light Intensity along a Ray / 314	
10.2	Variational Principles / 316	

10.2.1	The Lagrange Integral Invariant and Snell's Law /	316
10.2.2	The Principle of Least Time /	317
10.3	Paraxial Optics, Gaussian Optics, Matrix Optics /	319
10.4	Huygens' Principle /	322
	Bibliography /	324
11	Hamilton–Jacobi Theory	325
11.1	The Hamilton–Jacobi Equation /	325
11.1.1	Derivation /	325
11.1.2	The Geometric Picture /	327
11.1.3	Constant S Wavefronts /	328
11.2	Trajectory Determination Using the Hamilton–Jacobi Equation /	329
11.2.1	Complete Integral /	329
11.2.2	Finding a Complete Integral by Separation of Variables /	329
11.2.3	Hamilton–Jacobi Analysis of Projectile Motion /	330
11.2.4	The Jacobi Method for Exploiting a Complete Integral /	332
11.2.5	Completion of Projectile Example /	334
11.2.6	The Time-Independent Hamilton–Jacobi Equation /	335
11.2.7	Hamilton–Jacobi Treatment of 1-D Simple Harmonic Motion /	335
11.2.8	The Kepler Problem /	337
11.3	Analogies Between Optics and Quantum Mechanics /	343
11.3.1	General Discussion /	343
11.3.2	Classical Limit of the Schrödinger Equation /	343
11.3.3	Condition for Validity of Semiclassical Treatment /	345
12	Relativistic Mechanics	348
12.1	Review of Special Relativity Theory /	348
12.1.1	Form Invariance /	348
12.1.2	World Points /	349
12.1.3	World Intervals /	349
12.1.4	Proper Time /	350
12.1.5	The Lorentz Transformation /	351
12.1.6	Transformation of Velocities /	352
12.1.7	Four-Vectors /	353

12.1.8	Antisymmetric 4-Tensors /	355
12.1.9	The 4-Gradient of a 4-Scalar Function /	355
12.1.10	The 4-Velocity and 4-Acceleration /	355
12.2	The Relativistic Principle of Least Action /	356
12.3	Energy and Momentum /	357
12.3.1	4-Vector Notation /	358
12.4	Relativistic Hamilton–Jacobi Theory /	359
12.5	Forced Motion /	360
12.6	Generalization of the Action to Include Electromagnetic Forces /	360
12.7	Derivation of the Lorentz Force Law /	362
12.8	Gauge Invariance /	363
12.9	Trajectory Determination /	364
12.9.1	Motion in a Constant Uniform Electric Field /	364
12.9.2	Motion in a Constant Uniform Magnetic Field /	365
12.10	The Longitudinal Coordinate as Independent Variable /	366
	Bibliography /	368

13 Symplectic Mechanics

369

13.1	Derivation of Hamilton’s Equations /	369
13.1.1	Charged Particle in Electromagnetic Field /	371
13.2	Recapitulation /	372
13.3	The Symplectic Properties of Phase Space /	373
13.3.1	The Canonical Momentum One-Form /	373
13.3.2	The Symplectic Two-Form $\tilde{\omega}$ /	376
13.3.3	Invariance of the Symplectic Two-Form /	379
13.3.4	Use of $\tilde{\omega}$ to Associate Vectors and One-Forms /	381
13.3.5	Explicit Evaluation of Some Inner Products /	381
13.3.6	The Vector Field Associated with $\tilde{\mathbf{dH}}$ /	382
13.3.7	Hamilton’s Equations in Matrix Form /	383
13.4	Symplectic Geometry /	385
13.4.1	Symplectic Products and Symplectic Bases /	386
13.4.2	Symplectic Transformations /	387

13.4.3	Properties of Symplectic Matrices /	388
13.4.4	Alternate Coordinate Ordering /	395
13.5	Poisson Brackets of Scalar Functions /	396
13.5.1	The Poisson Bracket of Two Scalar Functions /	396
13.5.2	Properties of Poisson Brackets /	397
13.5.3	The Poisson Bracket and Quantum Mechanics /	398
13.6	Integral Invariants /	399
13.6.1	Integral Invariants in Electricity and Magnetism /	399
13.6.2	The Poincaré–Cartan Integral Invariant /	402
13.7	Invariance of the Poincaré–Cartan Integral Invariant I.I. /	405
13.7.1	The Extended Phase Space Two-Form and Its Special Eigenvector /	405
13.7.2	Proof of Invariance of the Poincaré Relative Integral Invariant /	407
13.8	Symplectic System Evolution /	409
13.8.1	Liouville’s Theorem and Generalizations /	410
	Bibliography /	412

PART VI APPROXIMATE METHODS 413

14 Analytic Basis for Approximation 415

14.1	Canonical Transformations /	415
14.1.1	The Action as a Generator of Canonical Transformations /	415
14.2	Time-Independent Canonical Transformation /	419
14.3	Action-Angle Variables /	421
14.3.1	The Action Variable of a Simple Harmonic Oscillator /	421
14.3.2	Adiabatic Invariance of the Action I /	422
14.3.3	Action/Angle Conjugate Variables /	426
14.3.4	Parametrically Driven Simple Harmonic Motion /	428
14.4	Examples of Adiabatic Invariance /	431
14.4.1	Variable-Length Pendulum /	431
14.4.2	Charged Particle in Magnetic Field /	432
14.4.3	Charged Particle in a Magnetic Trap /	434
